Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction and 5'-end one pass sequencing: Institute of Medical
            Science, University of Tokyo, Laboratory of Genome Structure, Human
            Genome Center; 3'-end one pass sequencing: RAB; clone selection for
            full insert sequencing: RAB and Helix Research Institute.

            DNA Sequencing by: Sequencing Group at the Stanford Human Genome
            Center, Stanford University School of Medicine, Stanford, CA  94305
            Web site:       http://www-shgc.stanford.edu
            Contact:  (Dickson, Mark) mcd@paxil.stanford.edu
            Dickson, M., Schmutz, J., Grimwood, J., Rodriquez, A., and Myers,
            R. M.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 168 Row: a Column: 20
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 34304116.

            Young,A., Zhang,L.-H. and Green,E.D.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAL Plate: 59 Row: a Column: 10
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 34304116.

COMMENT On Jul 30, 2002 this sequence version replaced gi:21913328.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Human poly-ubiquitin cDNA - for prodn. of labelled poly-ubiquitin, useful
PT for diagnosing diseases resulting from abnormalities of ubiquitin
PT metabolism.
XX
PS Claim 2; Page 8-10; 11pp; Japanese.
XX
CC This nucleotide sequence encodes the human poly-ubiquitin protein. The
CC gene was isolated from a cDNA library generated from polyA+ purified from

CC the human lymphoma cell line U937. Confirmation that the sequence encoded
CC the correct protein was done by in vitro translation in a rabbit
CC reticulocyte lysate. The DNA and protein can be used for diagnosis of
CC certain diseases resulting from abnormalities in metabolism of ubiquitins
CC or as a reagent for study of the ubiquitin system

PT   Human ubiquitin-combining enzyme E2 - derived from human epidermal cancer
PT   cell line KB ATCC CRL 17; useful as a research reagent.
XX
PS   Example; Page 7-10; 10pp; Japanese.
XX
CC   This sequence encodes polyubiquitin which was used to demonstrate the
CC   ubiquitin binding properties of the human ubiquitin-combining enzyme E2.
CC   Human ubiquitin-combining enzyme E2 and cDNA encoding it are useful as
CC   tools in biological research. The human E2 protein was isolated from
CC   human epidermal cancer cell line KB ATCC CRL 17

PT Detecting granulocyte activation by detecting differential expression of
PT genes associated with granulocyte activation, which serves as diagnostic
PT markers that is useful for monitoring disease states and drug toxicity.
XX
PS Claim 1; SEQ ID NO 24; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Identifying a gene involved in disease for treating hypoxia-regulated
PT   conditions, comprises comparing the transcriptome/proteome of two cell
PT   types under different conditions and identifying a differentially
PT   regulated gene.
XX
PS   Claim 37; Page 393; 538pp; English.
XX
CC   The present invention relates to methods for identifying genes and
CC   proteins that are implicated in a specific disease or physiological
CC   condition. The method comprises comparing the transcriptome/proteome of a
CC   specialised cell type implicated in a disease or condition with that of a
CC   second specialised cell type, under two experimental conditions, and
CC   identifying a gene that is differentially regulated in the two
CC   specialised cell types under experimental conditions. ABV77873-ABV78116
CC   and ABP65061-ABP65257 were identified using the methods of the invention.
CC   The coding sequences and proteins are useful for treating a disease in a
CC   patient, for manufacture of a medicament for treating hypoxia-regulated
CC   conditions, and for regulating tumourigenesis, angiogenesis, apoptosis,
CC   biological response to hypoxia conditions, or hypoxic-associated
CC   pathology in a patient. The coding sequences and proteins are also useful
CC   for monitoring the therapeutic treatment of a disease or physiological
CC   condition, such as cancer, ischaemic conditions, reperfusion injury,
CC   retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory
CC   conditions, wound healing, inflammation, erythropoiesis or hair loss

PT New polynucleotides and polypeptides for predicting the activity of
PT compounds that interact with protein tyrosine kinases and/or protein
PT tyrosine kinase pathways.
XX
PS Claim 2; SEQ ID NO 147; 139pp; English.
XX
CC The present invention describes a predictor set comprising a plurality of
CC polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

PT   Novel human housekeeping gene commonly expressed in different human
PT   tissues, useful as capture probe in DNA microarray.
XX
PS   Claim 1; SEQ ID NO 1; 940pp; Japanese.
XX
CC   The invention relates to a human housekeeping gene. The housekeeping gene
CC   is useful as a capture probe in DNA microarray. The housekeeping gene is
CC   useful as a reference with respect to the normal gene expression measured
CC   on various conditions, and an expression database of normal human tissue
CC   is useful as reference information for using a disease related gene for
CC   diagnosis or treatment. The housekeeping gene when used as capture probe,
CC   enables diagnosis of cancer. The present sequence represents a human
CC   housekeeping gene cDNA.

CC The present invention describes 1189 housekeeping genes and gene sets
CC containing them, expressed in 35 different human tissues. Also described:
CC (1) RNA and cDNA transcription products of the housekeeping genes; (2)
CC oligonucleotide probes hybridising to the housekeeping genes; (3) DNA
CC microarrays containing the oligonucleotide probes; (4) 1704 genes
CC expressed specifically in particular tissues; (5) RNA and cDNA
CC transcription products of the tissue-specific genes; (6) oligonucleotide
CC probes hybridising to the tissue-specific genes; and (7) DNA microarrays
CC containing the oligonucleotide probes. The tissue-specific genes are
CC expressed specifically in one of brain, thymus, pituitary, thyroid,
CC trachea, lung, breast, skin, skeletal muscle, heart, liver, spleen,
CC kidney, adrenal gland, pancreas, stomach, small intestine, colon,
CC bladder, prostate gland, testis, ovary, placenta, uterus, bone marrow,
CC foetal brain or foetal liver. The housekeeping genes can be used as
CC reference genes for the investigation and diagnosis of disease. The
CC present sequence represents a human housekeeping gene cDNA sequence which
CC is given in the exemplification of the present invention.

PT New human housekeeping genes and tissue-specific genes, used as a
PT reference for a normal or disease-associated gene expression measured
PT under various conditions.
XX
PS Claim 5; SEQ ID NO 1; 93pp; English.

XX
CC The present invention relates to novel human housekeeping genes and
CC tissue-specific genes. The present sequence is a transcription product of
CC one such gene. Also claimed is a DNA microarray carrying the set of
CC transcription products of the genes of the invention. The housekeeping
CC genes and tissue-specific genes are useful as references for a normal
CC gene expression or disease-associated gene expression measured under
CC various conditions. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC from seqdata.uspto.gov/sequence.html?DocID=20040229233.

PT   Prognosis of breast cancer, useful for identifying patients at high risk
PT   of relapse, based on analysis of differential expression of specific
PT   genes.
XX
PS   Claim 1; SEQ ID NO 5; 154pp; French.
XX
CC   The invention relates to a method for prognosis of breast cancer
CC   comprising extracting biological material (A) from a patient sample;
CC   contacting (A) with a reagent (R) specific for target genes (TG) having
CC   any of 68 sequences reproduced; and determining expression of TG. The
CC   method is used to identify patients at high risk of relapse, particularly
CC   to assist selection of primary treatment. This sequence corresponds to a
CC   differentially regulated gene found in patients at risk of a relapse into
CC   breast cancer.

PT New microarray, useful for studying functional gene networks and gene
PT expression as the result of a disease state in a cell, tissue, organ, or
PT subject such as cells that are pre-cancerous, cancerous, or invasive such
PT as breast cancer.
XX
PS Example 2; Page 34-35; 45pp; English.
XX
CC The invention relates to a microarray comprising at least 5
CC oligonucleotide probes, each of 150 nucleotides or less in length, and
CC complementary to at least 10 consecutive nucleotides of an mRNA molecule,
CC where the 10 consecutive nucleotides is, in its entirety, less than 360
CC nucleotides from the site of poly(A) addition of the mRNA molecule.
CC Analyzing gene expression in a cell comprises preparing a polynucleotide
CC comprising gene sequences expressed in the cell and hybridizing the
CC polynucleotide to a microarray above. The cell is from an FFPE sample,
CC preferably a breast cancer cell. The cell has been isolated by
CC microdissection of a cell-containing sample. The method may comprise
CC quantitative PCR amplification of a sequence containing at least 10
CC consecutive nucleotides of an mRNA molecule present in the cell, where
CC the 10 consecutive nucleotides is, in its entirety, less than 360
CC nucleotides from the site of poly(A) addition of the mRNA molecule and
CC where the mRNA is optionally a reference sequence. The microarray is
CC useful for conducting quantitative and qualitative analysis of gene
CC expression and for studying gene expression as the result of a disease
CC state in a cell, tissue, organ, or subject, particularly the expression
CC of genes in cells that are not normal, pre-cancerous, cancerous, or
CC invasive such as breast cancer. The microarray is also useful for
CC studying functional gene networks. The methods are useful for detecting
CC cancer cells (e.g. breast cancer cells), facilitating diagnosis of cancer
CC and the severity of a cancer in a subject, facilitating a determination
CC of the prognosis of a subject, and assessing the responsiveness of the
CC subject to therapy. The present sequence represents a human nucleotide
CC sequence that is similar to ubiquitin C, clone MGC:8448 IMAGE:2821375,
CC that can be detected using the method of the invention.

PT   New microarray, useful for studying functional gene networks and gene
PT   expression as the result of a disease state in a cell, tissue, organ, or
PT   subject such as cells that are pre-cancerous, cancerous, or invasive such
PT   as breast cancer.
XX
PS   Example 2; Page 35; 45pp; English.
XX
CC   The invention relates to a microarray comprising at least 5
CC   oligonucleotide probes, each of 150 nucleotides or less in length, and
CC   complementary to at least 10 consecutive nucleotides of an mRNA molecule,
CC   where the 10 consecutive nucleotides is, in its entirety, less than 360
CC   nucleotides from the site of poly(A) addition of the mRNA molecule.
CC   Analyzing gene expression in a cell comprises preparing a polynucleotide
CC   comprising gene sequences expressed in the cell and hybridizing the
CC   polynucleotide to a microarray above. The cell is from an FFPE sample,
CC   preferably a breast cancer cell. The cell has been isolated by
CC   microdissection of a cell-containing sample. The method may comprise
CC   quantitative PCR amplification of a sequence containing at least 10
CC   consecutive nucleotides of an mRNA molecule present in the cell, where
CC   the 10 consecutive nucleotides is, in its entirety, less than 360
CC   nucleotides from the site of poly(A) addition of the mRNA molecule and
CC   where the mRNA is optionally a reference sequence. The microarray is
CC   useful for conducting quantitative and qualitative analysis of gene
CC   expression and for studying gene expression as the result of a disease
CC   state in a cell, tissue, organ, or subject, particularly the expression
CC   of genes in cells that are not normal, pre-cancerous, cancerous, or
CC   invasive such as breast cancer. The microarray is also useful for
CC   studying functional gene networks. The methods are useful for detecting
CC   cancer cells (e.g. breast cancer cells), facilitating diagnosis of cancer
CC   and the severity of a cancer in a subject, facilitating a determination
CC   of the prognosis of a subject, and assessing the responsiveness of the
CC   subject to therapy. The present sequence represents a human ubiquitin C,
CC   clone IMAGE:2821375, that can be detected using the method of the
CC   invention.

PT New nucleic acid molecule and encoded polypeptide, for diagnosing,
PT preventing or treating cell proliferative disorders such as cancer.
XX
PS Claim 1; SEQ ID NO 1335; 5504pp; English.
XX
CC The present invention describes an isolated tumour-associated antigenic
CC target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide
CC sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-
CC (c). Also described: (1) an expression vector comprising the above
CC nucleic acid; (2) a host cell comprising the above expression vector; (3)
CC a process for producing a polypeptide; (4) an isolated polypeptide
CC comprising: (a) an amino acid sequence encoded by any of the above
CC nucleotide sequences; (b) an amino acid sequence encoded by the full-
CC length coding region of the above nucleotide sequences; or (c) a sequence
CC having at least 80% identical to (a) or (b); (5) a chimeric polypeptide
CC comprising the above polypeptide fused to a heterologous polypeptide; (6)
CC an isolated antibody that binds to the above polypeptide; (7) a process
CC for producing the antibody; (8) an isolated oligopeptide that binds to
CC the above polypeptide; (9) a tumour-associated antigenic target (TAT)
CC binding organic molecule that binds to the above polypeptide; (10) a
CC composition of matter comprising the above (chimeric) polypeptide,
CC antibody, oligopeptide or TAT binding organic molecule, in combination
CC with a carrier; (11) an article of manufacture comprising a container and
CC the composition of matter contained within the container; (12) methods of
CC inhibiting the growth of a cell that expresses the above protein, where
CC the growth of the cell is at least in part dependent upon a growth
CC potentiating effect of the above protein; (13) a method of
CC therapeutically treating a mammal having a cancerous tumour comprising
CC cells that express the above protein; (14) a method of determining the
CC presence of a protein in a sample suspected of containing the protein
CC described above; (15) methods of diagnosing the presence of a tumour in a
CC mammal; (16) a method for treating or preventing a cell proliferative
CC disorder associated with increased expression or activity of the above
CC protein; and (17) a method of binding an antibody, oligopeptide or
CC organic molecule to a cell that expresses the protein described above.
CC The TAT sequences have cytostatic activities, and can be used in gene
CC therapy. The composition and methods are useful for diagnosing,
CC preventing or treating cancer. The composition is also used for preparing

```
CC   a medicament for the therapeutic treatment or diagnostic detection of a
CC   cell proliferative disorder or cancer. The present sequence represents a
CC   human TAT cDNA sequence from the present invention.

PT   New tumor-associated antigenic target polypeptides and nucleic acids,
PT   useful in preparing a medicament for treating or detecting a
PT   proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT   prostate cancer or tumor.
XX
PS   Claim 1; SEQ ID NO 3853; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods and compositions for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 7714; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT Detecting granulocyte activation by detecting differential expression of
PT genes associated with granulocyte activation, which serves as diagnostic
PT markers that is useful for monitoring disease states and drug toxicity.
XX
PS Claim 1; SEQ ID NO 544; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Patent No. 6638766
; GENERAL INFORMATION:
;  APPLICANT: Albert, Henrik H.
;  APPLICANT:  Wei, Hairong
;  TITLE OF INVENTION: PLANT PROMOTER SEQUENCES AND METHODS OF USE THEREOF
;  FILE REFERENCE: UH-03648
;  CURRENT APPLICATION NUMBER: US/09/866,153
;  CURRENT FILING DATE:  2001-05-24
;  PRIOR APPLICATION NUMBER: 09/270,976
;  PRIOR FILING DATE: 1999-03-17
;  NUMBER OF SEQ ID NOS: 12
;  SOFTWARE: PatentIn Ver. 2.0
; SEQ ID NO 5
;   LENGTH: 5512
;   TYPE: DNA
;   ORGANISM: Saccharum Hybrid Cultivar H32-8560
;   FEATURE:
;   NAME/KEY: misc_feature
;   LOCATION: (2218)
;   OTHER INFORMATION: The "n" at position 2218 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2227)
;   OTHER INFORMATION: The "n" at position 2227 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2229)
;   OTHER INFORMATION: The "n" at position 2229 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2249)
;   OTHER INFORMATION: The "n" at position 2249 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2282)
;   OTHER INFORMATION: The "n" at position 2282 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2327)
;   OTHER INFORMATION: The "n" at position 2327 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2341)
;   OTHER INFORMATION: The "n" at position 2341 is any nucleotide.
;   NAME/KEY: misc_feature
;   LOCATION: (2477)
;   OTHER INFORMATION: The "n" at position 2477 is any nucleotide.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

JOURNAL Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

COMMENT Please visit our web site (http://genome.gsc.riken.jp/) for further details.
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC 3']. cDNA was cleaved with XhoI and SstI. Cloning sites, 5' end: XhoI; 3' end: SstI.
Host: SOLR.

COMMENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
            was normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2Q01 this sequence version replaced gi:30541755.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF008DA12QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 15, 2001 this sequence version replaced gi:31264133.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DF036AH03QP1&c=6328.r.

  TITLE     Full-length cDNA libraries and normalization
  JOURNAL   Unpublished (2001)
COMMENT     On Feb 13, 2001 this sequence version replaced gi:31071177.
            Contact: Genoscope
            Genoscope - Centre National de Sequencage
            2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE
            Email: seqref@genoscope.cns.fr, Web : www.genoscope.cns.fr
            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 6328.r
            For more information about this cluster, see
            http://www.genoscope.cns.fr/cdna?s=CS0DN003DA07QP1&c=6328.r.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
CS097362
LOCUS CS097362 2192 bp DNA linear PAT 03-JUN-2005
DEFINITION Sequence 5 from Patent WO2005045070.
ACCESSION CS097362
VERSION CS097362.1 GI:66953811
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.

REFERENCE 1
AUTHORS Lacroix,B., Krause,A., Puisieux,A. and Bachelot,T.
TITLE Method for prognosticating a breast cancer
JOURNAL Patent: WO 2005045070-A 5 19-MAY-2005;
BIOMERIEUX (FR); Centre Leon Berard (FR)

FEATURES Location/Qualifiers
source 1. .2192
/organism="Homo sapiens"
/mol_type="unassigned DNA"
/db_xref="taxon:9606"

RESULT 8
BC000449
LOCUS BC000449 2201 bp mRNA linear PRI 06-NOV-2003
DEFINITION Homo sapiens ubiquitin C, mRNA (cDNA clone IMAGE:2821375), partial cds.
ACCESSION BC000449
VERSION BC000449.2 GI:38197156
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAL Plate: 1 Row: f Column: 7
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 20149305.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAL Plate: 59 Row: a Column: 10
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 34304116.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction and 5'-end one pass sequencing: Institute of Medical
            Science, University of Tokyo, Laboratory of Genome Structure, Human
            Genome Center; 3'-end one pass sequencing: RAB; clone selection for
            full insert sequencing: RAB and Helix Research Institute.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 168 Row: a Column: 20
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 34304116.

COMMENT On Jul 30, 2002 this sequence version replaced gi:21913328.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

RESULT 17
AB003730
LOCUS AB003730 2291 bp DNA linear PRI 22-OCT-2002
DEFINITION Homo sapiens gene for polyubiquitin, complete cds.
ACCESSION AB003730
VERSION AB003730.1 GI:2627128
KEYWORDS polyubiquitin.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1
AUTHORS Nenoi,M., Mita,K., Ichimura,S. and Kawano,A.
TITLE Higher frequency of concerted evolutionary events in rodents than in man at the polyubiquitin gene VNTR locus
JOURNAL Genetics 148 (2), 867-876 (1998)
PUBMED 9504932
REFERENCE 2 (bases 1 to 2291)
AUTHORS Nenoi,M.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
```

HRI, and Biotechnology Center, National Institute of Technology and Evaluation; clone selection for full insert sequencing: HRI and RAB; annotation: HRI and RAB.

Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
Series: IRAK Plate: 15 Row: b Column: 24
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 24496788
This clone has the following problem: The cds is short compared to the longest cds in the locus.

COMMENT     NEDO human cDNA sequencing project supported by Ministry of
            Economy, Trade and Industry of Japan; cDNA full insert sequencing:
            Research Association for Biotechnology (RAB); cDNA library
            construction: Helix Research Institute (HRI) (supported by Japan
            Key Technology Center etc.); 5'- & 3'-end one pass sequencing: RAB,
            HRI, and Biotechnology Center, National Institute of Technology and
            Evaluation; clone selection for full insert sequencing: HRI and
            RAB; annotation: HRI and RAB.

  TITLE     Cloning and sequence analysis of a cDNA encoding poly-ubiquitin in
            human ovarian granulosa cells
  JOURNAL   Biochem. Biophys. Res. Commun. 147 (2), 581-587 (1987)
   PUBMED   2820408
COMMENT     Original source text: Human ovarian granulosa cell, cDNA to mRNA,
            clone pHGR21.
            Draft enty and computer-readable sequence for [1] kindly provided
            by R.Einspanier and K.H.Scheit, 04-DEC-1987.
            In human ovarian granulosa cells two main mRNA species were
            detected differing in size and amount.  The reported poly-ubiquitin
            cDNA sequence reported below is not homologous to the known
            ubiquitin-9 repeat or to the 3-repeat gene.

PT   Human poly-ubiquitin cDNA - for prodn. of labelled poly-ubiquitin, useful
PT   for diagnosing diseases resulting from abnormalities of ubiquitin
```

PT metabolism.
XX
PS Claim 2; Page 8-10; 11pp; Japanese.
XX
CC This nucleotide sequence encodes the human poly-ubiquitin protein. The
CC gene was isolated from a cDNA library generated from polyA+ purified from
CC the human lymphoma cell line U937. Confirmation that the sequence encoded
CC the correct protein was done by in vitro translation in a rabbit
CC reticulocyte lysate. The DNA and protein can be used for diagnosis of
CC certain diseases resulting from abnormalities in metabolism of ubiquitins
CC or as a reagent for study of the ubiquitin system

PT Detecting granulocyte activation by detecting differential expression of
PT genes associated with granulocyte activation, which serves as diagnostic
PT markers that is useful for monitoring disease states and drug toxicity.
XX
PS Claim 1; SEQ ID NO 24; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Identifying a gene involved in disease for treating hypoxia-regulated
PT   conditions, comprises comparing the transcriptome/proteome of two cell
PT   types under different conditions and identifying a differentially
PT   regulated gene.
XX
PS   Claim 37; Page 393; 538pp; English.
XX
CC   The present invention relates to methods for identifying genes and
CC   proteins that are implicated in a specific disease or physiological
CC   condition. The method comprises comparing the transcriptome/proteome of a
CC   specialised cell type implicated in a disease or condition with that of a
CC   second specialised cell type, under two experimental conditions, and
CC   identifying a gene that is differentially regulated in the two
CC   specialised cell types under experimental conditions. ABV77873-ABV78116
CC   and ABP65061-ABP65257 were identified using the methods of the invention.
CC   The coding sequences and proteins are useful for treating a disease in a
CC   patient, for manufacture of a medicament for treating hypoxia-regulated
CC   conditions, and for regulating tumourigenesis, angiogenesis, apoptosis,
CC   biological response to hypoxia conditions, or hypoxic-associated
CC   pathology in a patient. The coding sequences and proteins are also useful
CC   for monitoring the therapeutic treatment of a disease or physiological
CC   condition, such as cancer, ischaemic conditions, reperfusion injury,
CC   retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory
CC   conditions, wound healing, inflammation, erythropoiesis or hair loss

PT New polynucleotides and polypeptides for predicting the activity of
PT compounds that interact with protein tyrosine kinases and/or protein
PT tyrosine kinase pathways.
XX
PS Claim 2; SEQ ID NO 147; 139pp; English.
XX
CC The present invention describes a predictor set comprising a plurality of
CC polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

PT   Novel human housekeeping gene commonly expressed in different human
PT   tissues, useful as capture probe in DNA microarray.
XX
PS   Claim 1; SEQ ID NO 1; 940pp; Japanese.
XX
CC   The invention relates to a human housekeeping gene. The housekeeping gene
CC   is useful as a capture probe in DNA microarray. The housekeeping gene is
CC   useful as a reference with respect to the normal gene expression measured
CC   on various conditions, and an expression database of normal human tissue
CC   is useful as reference information for using a disease related gene for
CC   diagnosis or treatment. The housekeeping gene when used as capture probe,
CC   enables diagnosis of cancer. The present sequence represents a human
CC   housekeeping gene cDNA.

CC The present invention describes 1189 housekeeping genes and gene sets
CC containing them, expressed in 35 different human tissues. Also described:
CC (1) RNA and cDNA transcription products of the housekeeping genes; (2)
CC oligonucleotide probes hybridising to the housekeeping genes; (3) DNA
CC microarrays containing the oligonucleotide probes; (4) 1704 genes
CC expressed specifically in particular tissues; (5) RNA and cDNA
CC transcription products of the tissue-specific genes; (6) oligonucleotide
CC probes hybridising to the tissue-specific genes; and (7) DNA microarrays
CC containing the oligonucleotide probes. The tissue-specific genes are
CC expressed specifically in one of brain, thymus, pituitary, thyroid,
CC trachea, lung, breast, skin, skeletal muscle, heart, liver, spleen,
CC kidney, adrenal gland, pancreas, stomach, small intestine, colon,
CC bladder, prostate gland, testis, ovary, placenta, uterus, bone marrow,
CC foetal brain or foetal liver. The housekeeping genes can be used as
CC reference genes for the investigation and diagnosis of disease. The
CC present sequence represents a human housekeeping gene cDNA sequence which
CC is given in the exemplification of the present invention.

XX
PT New human housekeeping genes and tissue-specific genes, used as a
PT reference for a normal or disease-associated gene expression measured
PT under various conditions.
XX
PS Claim 5; SEQ ID NO 1; 93pp; English.
XX
CC The present invention relates to novel human housekeeping genes and
CC tissue-specific genes. The present sequence is a transcription product of
CC one such gene. Also claimed is a DNA microarray carrying the set of
CC transcription products of the genes of the invention. The housekeeping
CC genes and tissue-specific genes are useful as references for a normal
CC gene expression or disease-associated gene expression measured under
CC various conditions. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC from seqdata.uspto.gov/sequence.html?DocID=20040229233.

PT Prognosis of breast cancer, useful for identifying patients at high risk
PT of relapse, based on analysis of differential expression of specific
PT genes.
XX
PS Claim 1; SEQ ID NO 5; 154pp; French.
XX
CC The invention relates to a method for prognosis of breast cancer
CC comprising extracting biological material (A) from a patient sample;
CC contacting (A) with a reagent (R) specific for target genes (TG) having
CC any of 68 sequences reproduced; and determining expression of TG. The
CC method is used to identify patients at high risk of relapse, particularly
CC to assist selection of primary treatment. This sequence corresponds to a
CC differentially regulated gene found in patients at risk of a relapse into
CC breast cancer.

PT New microarray, useful for studying functional gene networks and gene
PT expression as the result of a disease state in a cell, tissue, organ, or
PT subject such as cells that are pre-cancerous, cancerous, or invasive such
PT as breast cancer.
XX
PS Example 2; Page 35; 45pp; English.
XX
CC The invention relates to a microarray comprising at least 5
CC oligonucleotide probes, each of 150 nucleotides or less in length, and
CC complementary to at least 10 consecutive nucleotides of an mRNA molecule,
CC where the 10 consecutive nucleotides is, in its entirety, less than 360
CC nucleotides from the site of poly(A) addition of the mRNA molecule.
CC Analyzing gene expression in a cell comprises preparing a polynucleotide
CC comprising gene sequences expressed in the cell and hybridizing the
CC polynucleotide to a microarray above. The cell is from an FFPE sample,
CC preferably a breast cancer cell. The cell has been isolated by
CC microdissection of a cell-containing sample. The method may comprise
CC quantitative PCR amplification of a sequence containing at least 10
CC consecutive nucleotides of an mRNA molecule present in the cell, where
CC the 10 consecutive nucleotides is, in its entirety, less than 360
CC nucleotides from the site of poly(A) addition of the mRNA molecule and
CC where the mRNA is optionally a reference sequence. The microarray is
CC useful for conducting quantitative and qualitative analysis of gene
CC expression and for studying gene expression as the result of a disease
CC state in a cell, tissue, organ, or subject, particularly the expression
CC of genes in cells that are not normal, pre-cancerous, cancerous, or
CC invasive such as breast cancer. The microarray is also useful for
CC studying functional gene networks. The methods are useful for detecting
CC cancer cells (e.g. breast cancer cells), facilitating diagnosis of cancer
CC and the severity of a cancer in a subject, facilitating a determination
CC of the prognosis of a subject, and assessing the responsiveness of the
CC subject to therapy. The present sequence represents a human ubiquitin C,
CC clone IMAGE:2821375, that can be detected using the method of the
CC invention.

CC   comprising gene sequences expressed in the cell and hybridizing the
CC   polynucleotide to a microarray above. The cell is from an FFPE sample,
CC   preferably a breast cancer cell. The cell has been isolated by
CC   microdissection of a cell-containing sample. The method may comprise
CC   quantitative PCR amplification of a sequence containing at least 10
CC   consecutive nucleotides of an mRNA molecule present in the cell, where
CC   the 10 consecutive nucleotides is, in its entirety, less than 360
CC   nucleotides from the site of poly(A) addition of the mRNA molecule and
CC   where the mRNA is optionally a reference sequence. The microarray is
CC   useful for conducting quantitative and qualitative analysis of gene
CC   expression and for studying gene expression as the result of a disease
CC   state in a cell, tissue, organ, or subject, particularly the expression
CC   of genes in cells that are not normal, pre-cancerous, cancerous, or
CC   invasive such as breast cancer. The microarray is also useful for
CC   studying functional gene networks. The methods are useful for detecting
CC   cancer cells (e.g. breast cancer cells), facilitating diagnosis of cancer
CC   and the severity of a cancer in a subject, facilitating a determination
CC   of the prognosis of a subject, and assessing the responsiveness of the
CC   subject to therapy. The present sequence represents a human nucleotide
CC   sequence that is similar to ubiquitin C, clone MGC:8448 IMAGE:2821375,
CC   that can be detected using the method of the invention.

PT New nucleic acid molecule and encoded polypeptide, for diagnosing,
PT preventing or treating cell proliferative disorders such as cancer.
XX
PS Claim 1; SEQ ID NO 1335; 5504pp; English.
XX
CC The present invention describes an isolated tumour-associated antigenic
CC target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide
CC sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of
CC (a); (c) the complement of (a) or (b); (d) a sequence that has 80%
CC sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-
CC (c). Also described: (1) an expression vector comprising the above
CC nucleic acid; (2) a host cell comprising the above expression vector; (3)
CC a process for producing a polypeptide; (4) an isolated polypeptide
CC comprising: (a) an amino acid sequence encoded by any of the above
CC nucleotide sequences; (b) an amino acid sequence encoded by the full-
CC length coding region of the above nucleotide sequences; or (c) a sequence
CC having at least 80% identical to (a) or (b); (5) a chimeric polypeptide
CC comprising the above polypeptide fused to a heterologous polypeptide; (6)
CC an isolated antibody that binds to the above polypeptide; (7) a process
CC for producing the antibody; (8) an isolated oligopeptide that binds to
CC the above polypeptide; (9) a tumour-associated antigenic target (TAT)
CC binding organic molecule that binds to the above polypeptide; (10) a
CC composition of matter comprising the above (chimeric) polypeptide,
CC antibody, oligopeptide or TAT binding organic molecule, in combination
CC with a carrier; (11) an article of manufacture comprising a container and
CC the composition of matter contained within the container; (12) methods of
CC inhibiting the growth of a cell that expresses the above protein, where
CC the growth of the cell is at least in part dependent upon a growth
CC potentiating effect of the above protein; (13) a method of
CC therapeutically treating a mammal having a cancerous tumour comprising
CC cells that express the above protein; (14) a method of determining the
CC presence of a protein in a sample suspected of containing the protein
CC described above; (15) methods of diagnosing the presence of a tumour in a
CC mammal; (16) a method for treating or preventing a cell proliferative

CC disorder associated with increased expression or activity of the above
CC protein; and (17) a method of binding an antibody, oligopeptide or
CC organic molecule to a cell that expresses the protein described above.
CC The TAT sequences have cytostatic activities, and can be used in gene
CC therapy. The composition and methods are useful for diagnosing,
CC preventing or treating cancer. The composition is also used for preparing
CC a medicament for the therapeutic treatment or diagnostic detection of a
CC cell proliferative disorder or cancer. The present sequence represents a
CC human TAT cDNA sequence from the present invention.

PT   New tumor-associated antigenic target polypeptides and nucleic acids,
PT   useful in preparing a medicament for treating or detecting a
PT   proliferative disorder, e.g. breast, lung, colorectal, ovarian or
PT   prostate cancer or tumor.
XX
PS   Claim 1; SEQ ID NO 3853; 7273pp; English.
XX
CC   The invention relates to human tumour-associated antigenic target (TAT)
CC   polypeptides, and their related nucleic acids. The TAT polypeptides are
CC   overexpressed in cancer tissues compared to normal tissues, and may thus
CC   serve as effective targets for the diagnosis and treatment of cancer in
CC   mammals. The invention also relates to nucleic acid and polypeptide
CC   sequences at least 80% identical to the TAT nucleic acids and
CC   polypeptides; expression vectors and host cells comprising a TAT nucleic
CC   acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC   molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC   TAT polypeptide; and methods and compositions for the treatment or
CC   diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC   antibodies, antagonists, binding molecules and compositions are useful
CC   for diagnosing or treating a cell proliferative disorder associated with
CC   increased TAT expression, particularly cancers such as breast cancer,
CC   colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC   cancer, pancreatic cancer, cervical cancer, cancers of the central
CC   nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC   used as hybridisation probes, in chromosome and gene mapping, in
CC   chromosome identification and in gene therapy. The present sequence
CC   represents a TAT nucleic acid of the invention

PT Identifying candidate p21 pathway modulator, by contacting an assay
PT system having modifiers of p21 polypeptide or gene with a test agent to
PT provide a reference activity in system and detecting test agent-biased
PT activity.
XX
PS Example; Page 107-108; 199pp; English.
XX
CC The invention relates to a novel method for identifying a candidate p21
CC pathway modulating agent. The novel method comprises contacting an assay
CC system, comprising a purified MP21 polypeptide (modifier of p21) or
CC nucleic acid, with a test agent under conditions, so that but for the
CC presence of a test agent, the assay system provides a reference activity
CC and detection of test agent-biased activity of the assay system. The
CC novel method of the invention is useful for identifying a candidate p21
CC pathway modulating agent. The invention also includes a method for
CC modulating the p21 pathway of a cell, and a method for diagnosing a
CC disease e.g. cancer in a patient. The identified modulators are useful in
CC diagnosis, therapy and pharmaceutical development. The modulators are
CC useful in a variety of diagnostic and therapeutic applications including
CC angiogenic, apoptotic and cell proliferation disorders. This
CC polynucleotide sequence represents a gene encoding an MP21 protein of the
CC invention

PT New microarray comprising probes for genes involved in
PT psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a
PT condition associated with PNI activity, e.g., inflammatory or infectious
PT diseases.
XX
PS Claim 1; SEQ ID NO 254; 254pp; English.
XX
CC The invention relates to a new microarray which comprises probes for
CC genes involved in psychoneuroendocrinimmune (PNI) activity. The

CC microarray is useful in diagnosing a condition associated with PNI
CC activity, such as CFS, type-2 diabetes, allergic condition, inflammation,
CC cancer and infection. The present sequence represents a
CC psychoneuroendocrinimmune gene expressed sequence tag. Note the
CC specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
CC SEQ ID NO 1829 are provided.

PT   Screening for anti-neoplastic agent involves exposing cells to a chemical
PT   agent to be tested for anti-neoplastic activity, and determining a change
PT   in expression of a gene of a signature gene set.
XX
PS   Claim 1; SEQ ID NO 7714; 44pp; English.
XX
CC   The present invention describes a method (M1) for screening for an anti-
CC   neoplastic agent. The method involves exposing cells to a chemical agent
CC   to be tested for anti-neoplastic activity, determining a change in
CC   expression of at least one gene (I) of a signature gene set, where (I)
CC   comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC   to ABL70110), or is at least 95% identical to (S), where a change in
CC   expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC   activity and can be used in gene therapy. M1 can be used for screening an
CC   anti-neoplastic agent, and can be used for producing a product which is
CC   the data collected with respect to the anti-neoplastic agent as a result
CC   of M1, and the data is sufficient to convey the chemical structure and/or
CC   properties of the agent. M1 can be used in the treatment of cancer such
CC   as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC   prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC   cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC   cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC   tumour

PT Detecting granulocyte activation by detecting differential expression of
PT genes associated with granulocyte activation, which serves as diagnostic
PT markers that is useful for monitoring disease states and drug toxicity.
XX
PS Claim 1; SEQ ID NO 544; 114pp; English.
XX
CC The invention relates to detecting (M1) granulocyte (GC) activation
CC (GCA), by detecting the level of expression of gene(s) (Gs) identified by
CC DNA chip analysis as given in the specification, and comparing the
CC expression level to an expression level in an unactivated GC, where
CC differential expression of Gs is indicative of GCA. Also included are
CC modulating (M2) GA by contacting GC with an agent that alters the
CC expression of at least one gene in Gs; (2) screening (M3) for an agent
CC capable of modulating GCA or an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease using the gene expression
CC profile; (3) detecting (M4) an inflammation (especially chronic) in a
CC tissue, an allergic response in a subject, exposure of a subject to a
CC pathogen or sterile inflammatory disease, by detecting the level of
CC expression in a sample of the tissue of gene(s) from Gs, where the level
CC of expression of the gene is indicative of inflammation; (4) treating
CC (M5) an inflammation (especially chronic) or in a tissue, an allergic
CC response in a subject, exposure of a subject to a pathogen or sterile
CC inflammatory disease, by contacting a tissue having inflammation with an
CC agent that modulates the expression of gene(s) from Gs in the tissue. M1
CC is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful
CC for screening an agent capable of modulating GCA preferably in an
CC inflammation in a tissue; M4 is useful for detecting an inflammation
CC (especially chronic) in a tissue, an allergic response in a subject,
CC exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
CC psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
CC cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
CC respiratory distress syndrome, inflammatory bowel disease, Crohn's
CC disease, ulcerative colitis, periodontal disease; also bacterial
CC infection, viral infection, parasitic infection, protozoal infection,
CC fungal infection and M5 is useful for treating one of the above
CC conditions. The present sequence represents a gene differentially
CC expressed in granulocytes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   Biomarkers useful for predicting or determining the response of a mammal
PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 58; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

PT Novel genes which are differentially regulated in prostate cancer, useful
PT for diagnosing prostate cancer in prostate tissue sample and assessing
PT therapeutic or preventive intervention in prostate cancer patients.
XX
PS Claim 1; Page 72-73; 416pp; English.
XX
CC The invention describes genes (I) which are differentially regulated in
CC prostate cancer. (I) Is useful for diagnosing a prostate cancer in a
CC sample comprising prostate tissue, which involves determining the number
CC of target genes which are differentially-regulated in the sample, where
CC the number is indicative of the probability that the sample comprises
CC prostate cancer. (I) Is useful for assessing a therapeutic or preventive
CC intervention in a subject having a prostate cancer, which involves
CC determining the expression levels in a sample comprising prostate tissue
CC of target genes which are differentially-regulated in prostate cancer.
CC Preferably, the expression levels of at least 10 genes are determined.
CC (I) is also useful for identifying agents that modulate a biological
CC activity of a polypeptide differentially-regulated in prostate cancer
CC cells, which involves contacting a polypeptide differentially-regulated
CC in prostate cancer cells with a test agent under conditions effective for
CC the test agent to modulate a biological activity of the polypeptide, and
CC determining whether the test agent modulates the biological activity. (I)
CC is useful as molecular markers, as drug targets, and for detecting,
CC diagnosing, staging, grading, assessing, monitoring, prognosticating,
CC preventing or treating, determining predisposition to diseases and
CC conditions especially relating to prostate cancer. (I) and its expression
CC products are used in the diagnostic test to assay for presence of cancer
CC e.g., in tissue sections, in biopsy sample, in total RNA, in lymph, in
CC blood etc. (I) is useful for assessing cancer e.g., to determine the type
CC of cancer, its stage of development, the nature of genetic defect, etc.
CC The polypeptide encoded by (I) can be used as target for therapy or drug
CC discovery. (I) can also be used for expressing the polypeptide and thus
CC for searching specific binding partners of the polypeptide. (I) is useful

```
CC   in therapeutic applications to treat prostate cancer. The identification
CC   of specific genes, and groups of genes, expressed in pathways
CC   physiologically relevant to prostate cancer permits the definition of
CC   functional and disease pathways and the delineation of targets in these
CC   pathways which are useful in diagnostic, therapeutic, and clinical
CC   applications. This sequence encodes a protein diferentially regulated in
CC   prostate cancer

XX
PS Claim 1; SEQ ID NO 1843; 2922pp; English.
XX
CC The invention relates to 2175 novel human ovarian antigens (ABP41054-
CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also
CC encompasses polypeptides 90% identical and polynucleotides 95% identical
CC to the sequences of the invention. The invention additionally relates to
CC recombinant vectors and host cells comprising human ovarian antigen
CC polynucleotides, antibodies against human ovarian antigens, and the use
CC of ovarian antigen polynucleotides and polypeptides in diagnosing,
CC treating, prognosing or preventing various ovary and/or breast-related
CC disorders. Such conditions include ovarian cancer and breast cancer, and
CC metastatic tumours of ovarian or breast origin, reproductive system
CC disorders (e.g., infertility, disorders of pregnancy, anovulation,
CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine
CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic
CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and
CC vaginitis), immune disorders (e.g., congenital and acquired
CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),
CC blood-related disorders (e.g., anaemia), cardiovascular disorders,
CC respiratory disorders, neurological disorders, gastrointestinal disorders
CC and urinary system disorders. Ovarian antigen polypeptides and
CC polynucleotides may also be used in screening for compounds which
CC modulate ovarian antigen expression or activity. The polynucleotides may
CC further be used for gene therapy, chromosome mapping, in the
CC identification of individuals and in forensic analysis, and the
CC polypeptides may be used as food additives or to prepare antibodies
CC useful in disease diagnosis, drug targeting and phenotyping. The present
CC sequence represents cDNA encoding a human ovarian antigen of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Lung tumor specific polynucleotides for inhibiting the development of
PT   lung cancer.
XX
PS   Claim 13; Page 143; 171pp; English.
XX
CC   The present invention describes lung tumour specific polynucleotides and
CC   tumour antigens. AAZ07144 to AAZ07246 and AAZ08301 to AAZ08325 represent
CC   specifically claimed polynucleotides, and AAY29486 to AAY29571 represent
CC   amino acid sequences from the present invention. The lung tumour specific
CC   polynucleotides and polypeptides can be used in pharmaceutical
CC   compositions and vaccines to inhibit the development of lung cancer. They
CC   can also be used to detect lung cancer in a patient. Probes and
CC   antibodies derived from the lung tumour sequences are useful in detection
CC   of lung cancer

PT   Novel lung tumor polypeptides and polynucleotides, useful for detecting,
PT   monitoring or treating cancer, especially lung cancer.
XX
PS   Claim 1; Page 158; 243pp; English.
XX
CC   The present sequence is given in a specification relating to compounds
CC   for therapy and diagnosis of lung cancer. Polypeptides comprising at
CC   least an immunogenic part of a lung tumour protein are disclosed. The
CC   polypeptides are useful for inhibiting the development of cancer,
CC   especially lung cancer. Samples of T cells expressing the polypeptides
CC   may be used to inhibit the development of cancer. The polypeptides are
CC   also useful for detecting and monitoring the progression of cancer,
CC   especially lung cancer

CC   The invention relates to isolated lung tumour-specific proteins and their
CC   corresponding cDNA molecules. Lung tumour-specific proteins and their
CC   antigen-presenting cells are useful for stimulating and/or expanding T
CC   cells specific for a tumour protein, and for inhibiting the development
CC   of cancer. The invention also relates to a composition useful for
CC   stimulating an immune response, and for treating cancer. The lung tumour
CC   specific oligonucleotide is useful in gene therapy and for diagnosis,
CC   detection and treatment of lung cancer. The present sequence is a cDNA
CC   encoding human lung tumour-specific protein

PT New polynucleotide and polypeptide, useful for preparing a composition
PT for diagnosing, treating or preventing cancer.
XX
PS Example 4; SEQ ID NO 171; 494pp; English.
XX
CC The invention relates to a novel isolated polynucleotide comprising one
CC of 32 47-6080 base pair sequences, given in the specification, or their
CC complements or degenerate variants, at least 20 contiguous residues of a
CC sequence in, or having at least 75 or 90 % identity with the isolated
CC polynucleotide, or that hybridise with the polynucleotide. The invention
CC further comprises: an isolated polypeptide; an expression vector
CC comprising the polynucleotide operably linked to an expression control
CC sequence; a host cell transformed or transfected with the expression
CC vector; an isolated antibody or its antigen-binding fragment that
CC specifically binds to the polypeptide; a method for detecting the
CC presence of a cancer in a patient; a fusion protein comprising the
CC polypeptide; an oligonucleotide that hybridises to the isolated
CC polynucleotide under moderately stringent conditions; a method for
CC stimulating and/or expanding T cells specific for a tumour protein; an
CC isolated T cell population; a composition comprising a first component
CC consisting of carriers and immunostimulants and a second component; a
CC method for stimulating an immune response in a patient; a method for
CC treating cancer in a patient; a method for determining cancer in a
CC patient; a diagnostic kit comprising at least one oligonucleotide or
CC antibody and a detection reagent comprising a reporter group; and a
CC method for inhibiting the development of cancer in a patient. The
CC compositions of the invention have cytostatic activity and can be used to
CC create a vaccine. The isolated polynucleotide is useful for preparing a
CC composition for diagnosing, treating or preventing cancer. This
CC polynucleotide sequence represents a human lung tumour-specific cDNA
CC sequence relating to the invention.

PT New polynucleotides encode lung tumor antigens and are useful to
PT stimulate an immune response or detect or treat a cancer in a patient,
PT particularly lung cancer.
XX
PS Example 4; SEQ ID NO 171; 63pp; English.
XX
CC The invention relates to polynucleotides encoding lung tumour antigens.
CC The invention also relates to the polypeptides encoded by the
CC polynucleotides, isolated antibodies or antigen-binding fragments that
CC specifically bind the polypeptides and a method for detecting cancer in a
CC patient, comprising obtaining a biological sample from the patient,

CC contacting the sample with a binding agent that binds a polypeptide of
CC the invention, detecting in the sample an amount of polypeptide that
CC binds to the binding agent, and comparing the amount of polypeptide to a
CC predetermined cut-off value. T cells specific for a tumour protein can be
CC stimulated and/or expanded by contacting the T cells with a polypeptide,
CC polynucleotide or an antigen-presenting cell that expresses a
CC polypeptide. Cancer development can be inhibited by incubating CD4+
CC and/or CD8+ T cells isolated from a patient with a polypeptide,
CC polynucleotide or an antigen-presenting cell that expresses a
CC polypeptide, so that the T cells proliferate. The invention is used to
CC stimulate an immune response or to detect or treat a cancer in a patient,
CC particularly lung cancer. This sequence represents human lung tumour
CC antigen cDNA of the invention. Note: The sequence data for this patent
CC did not form part of the printed specification but was obtained in
CC electronic format from USPTO at seqdata.uspto.gov/sequence.html.

PT New colon tumor polypeptides used to inhibit the development of cancer,
PT especially colon cancer, and for diagnosing and monitoring the
PT progression of the cancer.
XX
PS Claim 29; Page 138; 229pp; English.
XX
CC Sequences AAA77722-A78199 represent 478 cDNAs encoding proteins or
CC portions of proteins which are associated with human colon tumours. The
CC invention also specifically discloses 8 human colon tumour proteins
CC (AAB11897-B11904). The nucleic acids, the polypeptides they encode, and
CC antigen presenting cells (APCs, preferably dendritic cells) expressing
CC such polypeptides may be used in vaccines that target tumour cells,
CC especially colon tumour cells, thereby inhibiting the development of
CC cancer. T-cells specific for the polypeptide expressed by the APC are
CC used to remove tumour cells from biological samples, especially blood or
CC fractions thereof. The sample or the isolated T-cells specific for the
CC polypeptide can then be used to inhibit cancer development. CD4+ and/or
CC CD8+ T-cells from a patient may be incubated with a polypeptide or
CC nucleic acid of the invention, or an APC expressing such a polypeptide,
CC to cause the proliferation of specific T-cells. The T-cells can be cloned
CC and then administered back to the patient to inhibit cancer development.
CC Nucleic acids encoding the polypeptides and antibodies against the
CC polypeptides may be used to determine the expression level of a tumour
CC protein of the invention, and therefore to determine whether cancer cells
CC are present. Such diagnostic methods may also be used to monitor the
CC progression of a cancer by repeating the processes at time intervals, and
CC comparing the current result to previous results. The present sequence
CC represents a cDNA encoding a human colon tumour polypeptide

XX
PT   Colon tumor associated proteins and nucleic acids useful for the
PT   prevention, diagnosis and treatment of colonic cancer.
XX
PS   Claim 25; Page 179; 472pp; English.
XX
CC   The present invention describes colon tumour associated proteins (I) and
CC   the polynucleotides (II) that encode them. (I) have cytostatic activity.
CC   (I) and (II) can be used in gene therapy and vaccine production. (I) and
CC   (II) may be used in the prevention, diagnosis and treatment of diseases
CC   associated with inappropriate colon tumour associated protein (TCAP)
CC   expression, such as colonic cancer. For example, (I) and (II) may be used
CC   to treat disorders associated with decreased expression by rectifying
CC   mutations or deletions in a patient's genome that affect the activity of
CC   TCAPs by expressing inactive proteins or to supplement the patients own
CC   production of them. Additionally, (II) may be used to produce the TCAP
CC   proteins, by inserting the nucleic acids into a host cell culturing the
CC   cell to express the protein. (II) and its complementary sequences may
CC   also be used as DNA probes in diagnostic polymerase chain reaction (PCR)
CC   and hybridisation assays to detect and quantitate the presence of similar
CC   nucleic acids in samples, and therefore which patients may be in need of
CC   restorative therapy. (I) may also be used as antigens in the production
CC   of antibodies against TCAPs and in assays to identify modulators of TCAP
CC   expression and activity. Anti-(I) antibodies and antagonists may also be
CC   used to down regulate TCAP expression and activity. The anti-(I)
CC   antibodies may also be used as diagnostic agents for detecting the
CC   presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay
CC   (ELISA)). AAI28460 to AAI29512 and AAM24494 to AAM24523 represent
CC   nucleotide and amino acid sequences given in the exemplification of the
CC   present invention

XX
CC The invention relates to isolated lung tumour-specific proteins and their
CC corresponding cDNA molecules. Lung tumour-specific proteins and their
CC antigen-presenting cells are useful for stimulating and/or expanding T
CC cells specific for a tumour protein, and for inhibiting the development
CC of cancer. The invention also relates to a composition useful for
CC stimulating an immune response, and for treating cancer. The lung tumour
CC specific oligonucleotide is useful in gene therapy and for diagnosis,
CC detection and treatment of lung cancer. The present sequence is human
CC lung tumour-specific cDNA

PT New polynucleotide and polypeptide, useful for preparing a composition
PT for diagnosing, treating or preventing cancer.
XX
PS Example 4; SEQ ID NO 275; 494pp; English.
XX
CC The invention relates to a novel isolated polynucleotide comprising one
CC of 32 47-6080 base pair sequences, given in the specification, or their
CC complements or degenerate variants, at least 20 contiguous residues of a
CC sequence in, or having at least 75 or 90 % identity with the isolated
CC polynucleotide, or that hybridise with the polynucleotide. The invention
CC further comprises: an isolated polypeptide; an expression vector
CC comprising the polynucleotide operably linked to an expression control
CC sequence; a host cell transformed or transfected with the expression
CC vector; an isolated antibody or its antigen-binding fragment that
CC specifically binds to the polypeptide; a method for detecting the
CC presence of a cancer in a patient; a fusion protein comprising the
CC polypeptide; an oligonucleotide that hybridises to the isolated
CC polynucleotide under moderately stringent conditions; a method for
CC stimulating and/or expanding T cells specific for a tumour protein; an

```
CC   isolated T cell population; a composition comprising a first component
CC   consisting of carriers and immunostimulants and a second component; a
CC   method for stimulating an immune response in a patient; a method for
CC   treating cancer in a patient; a method for determining cancer in a
CC   patient; a diagnostic kit comprising at least one oligonucleotide or
CC   antibody and a detection reagent comprising a reporter group; and a
CC   method for inhibiting the development of cancer in a patient. The
CC   compositions of the invention have cytostatic activity and can be used to
CC   create a vaccine. The isolated polynucleotide is useful for preparing a
CC   composition for diagnosing, treating or preventing cancer. This
CC   polynucleotide sequence represents a human lung tumour-specific cDNA
CC   sequence relating to the invention.

PT   New polynucleotides encode lung tumor antigens and are useful to
PT   stimulate an immune response or detect or treat a cancer in a patient,
PT   particularly lung cancer.
XX
PS   Example 4; SEQ ID NO 275; 63pp; English.
XX
CC   The invention relates to polynucleotides encoding lung tumour antigens.
CC   The invention also relates to the polypeptides encoded by the
CC   polynucleotides, isolated antibodies or antigen-binding fragments that
CC   specifically bind the polypeptides and a method for detecting cancer in a
CC   patient, comprising obtaining a biological sample from the patient,
CC   contacting the sample with a binding agent that binds a polypeptide of
CC   the invention, detecting in the sample an amount of polypeptide that
CC   binds to the binding agent, and comparing the amount of polypeptide to a
CC   predetermined cut-off value. T cells specific for a tumour protein can be
CC   stimulated and/or expanded by contacting the T cells with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide. Cancer development can be inhibited by incubating CD4+
CC   and/or CD8+ T cells isolated from a patient with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide, so that the T cells proliferate. The invention is used to
CC   stimulate an immune response or to detect or treat a cancer in a patient,
CC   particularly lung cancer. This sequence represents human lung tumour
CC   antigen cDNA of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification but was obtained in
CC   electronic format from USPTO at seqdata.uspto.gov/sequence.html.

PT Lung tumor specific polynucleotides for inhibiting the development of
PT lung cancer.
XX
PS Claim 13; Page 130; 171pp; English.
XX
CC The present invention describes lung tumour specific polynucleotides and
CC tumour antigens. AAZ07144 to AAZ07246 and AAZ08301 to AAZ08325 represent
CC specifically claimed polynucleotides, and AAY29486 to AAY29571 represent
CC amino acid sequences from the present invention. The lung tumour specific
CC polynucleotides and polypeptides can be used in pharmaceutical
CC compositions and vaccines to inhibit the development of lung cancer. They
CC can also be used to detect lung cancer in a patient. Probes and
CC antibodies derived from the lung tumour sequences are useful in detection
CC of lung cancer

XX
CC The present sequence is given in a specification relating to compounds
CC for therapy and diagnosis of lung cancer. Polypeptides comprising at

```
CC   least an immunogenic part of a lung tumour protein are disclosed. The
CC   polypeptides are useful for inhibiting the development of cancer,
CC   especially lung cancer. Samples of T cells expressing the polypeptides
CC   may be used to inhibit the development of cancer. The polypeptides are
CC   also useful for detecting and monitoring the progression of cancer,
CC   especially lung cancer

PT   New human lung-specific polynucleotides and polypeptides for the
PT   diagnosis and treatment of disease e.g. lung cancer.
XX
PS   Example 3; Page 199-200; 378pp; English.
XX
CC   The invention relates to isolated lung tumour-specific proteins and their
CC   corresponding cDNA molecules. Lung tumour-specific proteins and their
CC   antigen-presenting cells are useful for stimulating and/or expanding T
CC   cells specific for a tumour protein, and for inhibiting the development
CC   of cancer. The invention also relates to a composition useful for
CC   stimulating an immune response, and for treating cancer. The lung tumour
CC   specific oligonucleotide is useful in gene therapy and for diagnosis,
CC   detection and treatment of lung cancer. The present sequence is human
CC   lung tumour-specific cDNA

PT   New polynucleotide and polypeptide, useful for preparing a composition
PT   for diagnosing, treating or preventing cancer.
XX
PS   Example 3; SEQ ID NO 141; 494pp; English.
XX
CC   The invention relates to a novel isolated polynucleotide comprising one
CC   of 32 47-6080 base pair sequences, given in the specification, or their
CC   complements or degenerate variants, at least 20 contiguous residues of a
CC   sequence in, or having at least 75 or 90 % identity with the isolated
CC   polynucleotide, or that hybridise with the polynucleotide. The invention
CC   further comprises: an isolated polypeptide; an expression vector
CC   comprising the polynucleotide operably linked to an expression control
CC   sequence; a host cell transformed or transfected with the expression
CC   vector; an isolated antibody or its antigen-binding fragment that
CC   specifically binds to the polypeptide; a method for detecting the
CC   presence of a cancer in a patient; a fusion protein comprising the
CC   polypeptide; an oligonucleotide that hybridises to the isolated
CC   polynucleotide under moderately stringent conditions; a method for
CC   stimulating and/or expanding T cells specific for a tumour protein; an
CC   isolated T cell population; a composition comprising a first component
CC   consisting of carriers and immunostimulants and a second component; a
CC   method for stimulating an immune response in a patient; a method for
CC   treating cancer in a patient; a method for determining cancer in a
CC   patient; a diagnostic kit comprising at least one oligonucleotide or
CC   antibody and a detection reagent comprising a reporter group; and a
CC   method for inhibiting the development of cancer in a patient. The
CC   compositions of the invention have cytostatic activity and can be used to
CC   create a vaccine. The isolated polynucleotide is useful for preparing a
CC   composition for diagnosing, treating or preventing cancer. This
CC   polynucleotide sequence represents a human lung tumour-specific cDNA
CC   sequence relating to the invention.

PT   New polynucleotides encode lung tumor antigens and are useful to
PT   stimulate an immune response or detect or treat a cancer in a patient,
PT   particularly lung cancer.
XX
PS   Example 3; SEQ ID NO 141; 63pp; English.
XX
CC   The invention relates to polynucleotides encoding lung tumour antigens.
CC   The invention also relates to the polypeptides encoded by the
CC   polynucleotides, isolated antibodies or antigen-binding fragments that
CC   specifically bind the polypeptides and a method for detecting cancer in a
CC   patient, comprising obtaining a biological sample from the patient,
CC   contacting the sample with a binding agent that binds a polypeptide of
CC   the invention, detecting in the sample an amount of polypeptide that
CC   binds to the binding agent, and comparing the amount of polypeptide to a
CC   predetermined cut-off value. T cells specific for a tumour protein can be
CC   stimulated and/or expanded by contacting the T cells with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide. Cancer development can be inhibited by incubating CD4+
```

```
CC   and/or CD8+ T cells isolated from a patient with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide, so that the T cells proliferate. The invention is used to
CC   stimulate an immune response or to detect or treat a cancer in a patient,
CC   particularly lung cancer. This sequence represents human lung tumour
CC   antigen cDNA of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification but was obtained in
CC   electronic format from USPTO at seqdata.uspto.gov/sequence.html.

PT   New polynucleotides encode lung tumor antigens and are useful to
PT   stimulate an immune response or detect or treat a cancer in a patient,
PT   particularly lung cancer.
XX
PS   Claim 11; SEQ ID NO 692; 63pp; English.
XX
CC   The invention relates to polynucleotides encoding lung tumour antigens.
CC   The invention also relates to the polypeptides encoded by the
CC   polynucleotides, isolated antibodies or antigen-binding fragments that
CC   specifically bind the polypeptides and a method for detecting cancer in a
CC   patient, comprising obtaining a biological sample from the patient,
CC   contacting the sample with a binding agent that binds a polypeptide of
CC   the invention, detecting in the sample an amount of polypeptide that
CC   binds to the binding agent, and comparing the amount of polypeptide to a
CC   predetermined cut-off value. T cells specific for a tumour protein can be
CC   stimulated and/or expanded by contacting the T cells with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide. Cancer development can be inhibited by incubating CD4+
CC   and/or CD8+ T cells isolated from a patient with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide, so that the T cells proliferate. The invention is used to
CC   stimulate an immune response or to detect or treat a cancer in a patient,
CC   particularly lung cancer. This sequence represents human lung tumour
CC   antigen cDNA of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification but was obtained in
CC   electronic format from USPTO at seqdata.uspto.gov/sequence.html.

XX
CC   The present sequence is given in a specification relating to compounds
CC   for therapy and diagnosis of lung cancer. Polypeptides comprising at
CC   least an immunogenic part of a lung tumour protein are disclosed. The
CC   polypeptides are useful for inhibiting the development of cancer,
CC   especially lung cancer. Samples of T cells expressing the polypeptides
CC   may be used to inhibit the development of cancer. The polypeptides are
CC   also useful for detecting and monitoring the progression of cancer,
CC   especially lung cancer

PS   Example 4; Page 248; 378pp; English.
XX
CC   The invention relates to isolated lung tumour-specific proteins and their
CC   corresponding cDNA molecules. Lung tumour-specific proteins and their
CC   antigen-presenting cells are useful for stimulating and/or expanding T
CC   cells specific for a tumour protein, and for inhibiting the development
CC   of cancer. The invention also relates to a composition useful for
CC   stimulating an immune response, and for treating cancer. The lung tumour
CC   specific oligonucleotide is useful in gene therapy and for diagnosis,
CC   detection and treatment of lung cancer. The present sequence is human
CC   lung tumour-specific cDNA

XX
PT   New polynucleotide and polypeptide, useful for preparing a composition
PT   for diagnosing, treating or preventing cancer.
XX
PS   Example 4; SEQ ID NO 248; 494pp; English.
XX
CC   The invention relates to a novel isolated polynucleotide comprising one
CC   of 32 47-6080 base pair sequences, given in the specification, or their
CC   complements or degenerate variants, at least 20 contiguous residues of a
CC   sequence in, or having at least 75 or 90 % identity with the isolated
CC   polynucleotide, or that hybridise with the polynucleotide. The invention
CC   further comprises: an isolated polypeptide; an expression vector
CC   comprising the polynucleotide operably linked to an expression control
CC   sequence; a host cell transformed or transfected with the expression
CC   vector; an isolated antibody or its antigen-binding fragment that
CC   specifically binds to the polypeptide; a method for detecting the
CC   presence of a cancer in a patient; a fusion protein comprising the
CC   polypeptide; an oligonucleotide that hybridises to the isolated
CC   polynucleotide under moderately stringent conditions; a method for
CC   stimulating and/or expanding T cells specific for a tumour protein; an
CC   isolated T cell population; a composition comprising a first component
CC   consisting of carriers and immunostimulants and a second component; a
CC   method for stimulating an immune response in a patient; a method for
CC   treating cancer in a patient; a method for determining cancer in a
CC   patient; a diagnostic kit comprising at least one oligonucleotide or
CC   antibody and a detection reagent comprising a reporter group; and a
CC   method for inhibiting the development of cancer in a patient. The
CC   compositions of the invention have cytostatic activity and can be used to
CC   create a vaccine. The isolated polynucleotide is useful for preparing a
CC   composition for diagnosing, treating or preventing cancer. This
CC   polynucleotide sequence represents a human lung tumour-specific cDNA
CC   sequence relating to the invention.

PT   New polynucleotides encode lung tumor antigens and are useful to
PT   stimulate an immune response or detect or treat a cancer in a patient,
PT   particularly lung cancer.
XX
PS   Example 4; SEQ ID NO 248; 63pp; English.
XX
CC   The invention relates to polynucleotides encoding lung tumour antigens.
CC   The invention also relates to the polypeptides encoded by the
CC   polynucleotides, isolated antibodies or antigen-binding fragments that
CC   specifically bind the polypeptides and a method for detecting cancer in a
CC   patient, comprising obtaining a biological sample from the patient,
CC   contacting the sample with a binding agent that binds a polypeptide of
CC   the invention, detecting in the sample an amount of polypeptide that
CC   binds to the binding agent, and comparing the amount of polypeptide to a
CC   predetermined cut-off value. T cells specific for a tumour protein can be
CC   stimulated and/or expanded by contacting the T cells with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide. Cancer development can be inhibited by incubating CD4+
CC   and/or CD8+ T cells isolated from a patient with a polypeptide,
CC   polynucleotide or an antigen-presenting cell that expresses a
CC   polypeptide, so that the T cells proliferate. The invention is used to
CC   stimulate an immune response or to detect or treat a cancer in a patient,
CC   particularly lung cancer. This sequence represents human lung tumour
CC   antigen cDNA of the invention. Note: The sequence data for this patent
CC   did not form part of the printed specification but was obtained in
CC   electronic format from USPTO at seqdata.uspto.gov/sequence.html.

PT New isolated polynucleotides, which are differentially expressed in colon
PT cancer cell, useful for treating cancer, e.g. colon cancer, breast
PT cancer, or pancreatic cancer.
XX
PS Claim 1; SEQ ID NO 1170; 97pp; English.
XX
CC The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC are differentially expressed in colon cancer cells. The invention also
CC relates to vectors and host cells comprising a differentially expressed
CC polynucleotide of the invention; a method for detecting a cancerous cell
CC by detection of a gene product of the polynucleotides; a method for
CC inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC of the polynucleotides; a method of treating an individual with cancer by
CC administration of a modulator of a gene product of the polynucleotides;
CC and an isolated antibody that specifically binds to a polypeptide encoded
CC by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC antibodies, and methods are useful for the detection of cancerous cells;
CC for the diagnosis, prognosis and management of cancer; for the
CC identification of agents that modulate the phenotype of cancerous cells;
CC for the identification of therapeutic targets for cancer chemotherapy;
CC and for the treatment of cancer, especially colon cancer and metastasized
CC colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC are also useful as a source of probes or primers for use in diagnostic
CC methods. The differentially expressed polynucleotides or their encoded
CC proteins can additionally be used as vaccines to modulate primary immune
CC responses for the prevention or treatment of cancer. The present sequence
CC represents a specifically claimed polynucleotide which is differentially
CC expressed in colon cancer. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

XX
PS Claim 1; SEQ ID NO 3855; 7273pp; English.
XX
CC The invention relates to human tumour-associated antigenic target (TAT)
CC polypeptides, and their related nucleic acids. The TAT polypeptides are
CC overexpressed in cancer tissues compared to normal tissues, and may thus
CC serve as effective targets for the diagnosis and treatment of cancer in
CC mammals. The invention also relates to nucleic acid and polypeptide
CC sequences at least 80% identical to the TAT nucleic acids and
CC polypeptides; expression vectors and host cells comprising a TAT nucleic
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a
CC TAT polypeptide; and methods and compositions for the treatment or
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,
CC antibodies, antagonists, binding molecules and compositions are useful
CC for diagnosing or treating a cell proliferative disorder associated with
CC increased TAT expression, particularly cancers such as breast cancer,
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder
CC cancer, pancreatic cancer, cervical cancer, cancers of the central
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be
CC used as hybridisation probes, in chromosome and gene mapping, in
CC chromosome identification and in gene therapy. The present sequence
CC represents a TAT nucleic acid of the invention

CC Sequences AAF21614 - AAF22031 represent DNA sequences encoding human
CC proteins AAB58711 - AAB59128. The DNA and protein sequences are
CC associated with breast and ovarian cancer. Included in the invention are
CC sequences AAF22032 - AAF22040 and AAB59129 which are used in the
CC isolation and characterisation of the DNA and protein sequences of the
CC invention. The breast and ovarian cancer associated DNA, protein, agonist
CC or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic;
CC neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic;
CC antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial;
CC antifungal; antiparasitic and cardiant activity. The polynucleotide and
CC protein sequences are used in the diagnosis of cancer, particularly
CC breast and ovarian cancer. The nucleic acid sequences, proteins, agonists
CC and agonists may also be used in the diagnosis, prevention and treatment
CC of immune disorders e.g. Addison's disease, allergies, autoimmune
CC haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's
CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis;
CC cardiovascular disorders such as myocardial ischaemias; wound healing;
CC neurological diseases such as cerebral anoxia and epilepsy; and
CC infectious diseases

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 20662; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   Immunogenic portion of an ovarian carcinoma protein and the nucleic acid
PT   encoding it, useful for the diagnosis, prevention and treatment of
PT   cancer, preferably ovarian cancer.
XX
PS   Claim 18; Fig 15; 299pp; English.
XX
CC   The present invention describes an isolated polypeptide comprising an
CC   immunogenic portion of an ovarian carcinoma protein (or its variants).
CC   Ovarian carcinoma proteins, and polynucleotides encoding them, have
CC   cytostatic activity and can be used in gene therapy and vaccines. Ovarian
CC   carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful
CC   for the prevention, diagnosis and treatment of cancer, preferably ovarian
CC   cancer. AAA69691 to AAA70077 and AAB12552 to AAB12557 represent human
CC   ovarian carcinoma polynucleotides and proteins used in the
CC   exemplification of the present invention

PT   New isolated O772P polypeptides and polynucleotides, useful in gene
PT   therapy, particularly for treating or diagnosing cancer, e.g. ovarian
PT   cancer.
XX
PS   Example 1; Fig 15; 371pp; English.
XX
CC   The invention relates to an isolated O772P polypeptide, which has the
CC   structure fully defined in the specification. The composition containing
CC   the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
CC   or antigen presenting cells are useful for stimulating an immune response
CC   and treating ovarian cancer. Detecting the presence of the
CC   polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
CC   carcinoma cDNAs and protein cDNAs were identified using microarray
CC   technology. The present sequence represents a human ovarian carcinoma
CC   antigen polynucleotide.

PT Oncogenic nucleic acids useful for the prevention, diagnosis and
PT treatment of breast cancer.
XX
PS Example 1; SEQ ID NO 152; 399pp; English.
XX
CC The invention describes nucleic acids (I) and the polypeptides (II) they
CC encode. The nucleic acids (I) may be used for preventing, diagnosing and
CC treating diseases related to their aberrant expression i.e. breast
CC cancers. For example, (I) and (II) may be used to treat disorders
CC associated with decreased expression by rectifying mutations or deletions
CC in a patient's genome that affect the activity of (II) by expressing
CC inactive proteins or to supplement the patients own production of (II).
CC Additionally, (I) may be used to produce (II), by inserting (I) into a
CC host cell and culturing the cell to express the protein (II). (I) And its
CC complementary sequences may also be used as DNA probes in diagnostic
CC assays to detect and quantitate the presence of similar nucleic acids in
CC samples, and therefore which patients may be in need of restorative
CC therapy. The host cell may also be used as antigens in the production of
CC antibodies against (II) and in assays to identify modulators of (II)'s
CC expression and activity. The anti-(II) antibodies, agonists and
CC antagonists may be used to regulate expression and activity and as
CC diagnostic agents for detecting the presence of (II) in samples (e.g. by
CC immunoassay). This sequence represents a polynucleotide encoding a
CC secreted ovarian carcinoma antigen.

CC The invention relates to human ovarian carcinoma polypeptides, designated
CC O8E or O772P, and the polynucleotides encoding them. The invention also
CC relates to methods for inhibiting the development of cancer, e.g. ovarian
CC cancer in a patient, methods for stimulating and/or expanding T cells and
CC methods for identifying secreted tumour antigens. The polypeptides,
CC compositions, antibodies to the polypeptides and methods are useful for
CC diagnosing, preventing, treating and monitoring cancer, e.g. ovarian
CC cancer. The composition is particularly useful for stimulating an immune
CC response in patient. This sequence represents a human ovarian carcinoma
CC polynucleotide of the invention.

XX
CC The invention relates to an isolated polynucleotide comprising a sequence
CC of, a sequence hybridizing under highly stringent conditions to, or
CC having at least 75, or 90% identity to a 849 or 1399 bp, fully defined in
CC the specification, its complement or degenerate variants, or a sequence
CC of at least 20 contiguous residues of the 849 or 1399 bp sequence. The
CC polynucleotides and polypeptides are useful for diagnosing, preventing
CC and treating diseases, such as ovarian cancer, and for eliciting humoral
CC and/or cellular immune response. This sequence corresponds to an ovarian
CC carcinoma antigen cDNA of the invention.

PT In vitro detection of systemic inflammatory response syndrome and related
PT conditions, for e.g. monitoring progression, comprises detecting abnormal
PT expression of disease-related genes.
XX
PS Disclosure; Page; 75pp; German.
XX
CC The invention relates to a novel method for in vitro detection of
CC systemic inflammatory response syndrome (SIRS). The method comprises
CC detecting abnormal expression of disease-related genes, or their
CC associated peptides. The method of the invention demonstrates
CC antibacterial, immunosuppressive and antiinflammatory applications and
CC may be used for early differential diagnosis, monitoring progression,
CC assessing risk, assessing the likely response to treatment and for post
CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and
CC sepsis-like conditions. The recombinant or synthetic nucleic acid
CC sequences of the invention, or derived proteins or peptides, may be
CC useful as calibrants in assays for the specified diseases, for evaluating
CC activity or toxicity in screening for active agents and/or for
CC preparation of agents for treatment or prevention of the specified
CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic
CC marker DNA fragment of the invention. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at ftp.wipo.int/pub/published
CC pct_sequences. Furthermore, a number of arbitrary SEQ ID NO.s are
CC disclosed within the specification, however, these have not been taken
CC into account during indexing due to inconsistencies in application and
CC format

PT Determining open reading frames of genome of an organism e.g. a human
PT suffering from cancer involves use of single oligonucleotide primer at
PT low stringency for preparing single-stranded cDNA from mRNA of
PT individual.
XX
PS Example 9; Page 190; 959pp; English.
XX
CC The invention describes a method of determining open reading frames in
CC the genome of organism, comprising contacting mRNA from cell of organism
CC with a single oligonucleotide primer (I) at low stringency, preparing
CC single-stranded cDNA by reverse transcribing mRNA with (I), amplifying
CC cDNA , sequencing the product, and repeating the contacting, preparing
CC and amplifying steps with different primers and sequencing resulting
CC nucleic acids. The method is useful for: determining that a known
CC nucleotide sequence from a genome of an organism corresponds to a
CC nucleotide sequence of an open reading frame; for preparing a contig,
CC nucleic acid molecule from a genome of an organism; and for sequencing
CC all or part of a genome of an organism. mRNA is obtained from mammalian
CC or human cell which is associated with a pathological condition e.g. a
CC colon cancer or breast cancer cell. The method is useful for analyses of
CC populations of subjects and can be used to carry out genetic analyses of
CC large or small populations. further, it can be used to study living
CC systems to determine if, e.g. there have been genetic shifts which render
CC an individual or population more or less likely to be afflicted with
CC diseases such as cancer, to determine antibiotic resistance or non-
CC tolerance, and so forth. The method can also be used in the study of
CC congenital diseases, and the risk of affliction to a foetus, as well as
CC the study of whether the conditions are likely to be passed to offspring
CC through ova or sperm. The analyses for pathological conditions can be
CC carried out in all animals, plants, birds, fish, etc. Using this method,
CC in the area of agriculture, for example the genomes of food crops can be
CC studied to determine if resistance genes are present, defects in plant
CC genomes can also be studied in this way. Similarly, the method permits
CC determination of the pathogens which integrate into the genome, such as
CC retroviruses and other integrating viruses such as influenza virus, have
CC undergone shifts or mutations, which may require different approaches to
CC therapy. This method is also applied to eukaryotic pathogens, such as
CC trypanosomes, different types of Plasmodium, etc. The method essentially
CC eliminates sequencing of non-coding portions. This sequence represents a
CC polynucleotide isolated from human colon cancer cell cDNA library

XX
PT   Colon tumor associated proteins and nucleic acids useful for the
PT   prevention, diagnosis and treatment of colonic cancer.
XX
PS   Claim 25; Page 311; 472pp; English.
XX
CC   The present invention describes colon tumour associated proteins (I) and
CC   the polynucleotides (II) that encode them. (I) have cytostatic activity.
CC   (I) and (II) can be used in gene therapy and vaccine production. (I) and
CC   (II) may be used in the prevention, diagnosis and treatment of diseases
CC   associated with inappropriate colon tumour associated protein (TCAP)
CC   expression, such as colonic cancer. For example, (I) and (II) may be used
CC   to treat disorders associated with decreased expression by rectifying
CC   mutations or deletions in a patient's genome that affect the activity of
CC   TCAPs by expressing inactive proteins or to supplement the patients own
CC   production of them. Additionally, (II) may be used to produce the TCAP
CC   proteins, by inserting the nucleic acids into a host cell culturing the
CC   cell to express the protein. (II) and its complementary sequences may
CC   also be used as DNA probes in diagnostic polymerase chain reaction (PCR)
CC   and hybridisation assays to detect and quantitate the presence of similar
CC   nucleic acids in samples, and therefore which patients may be in need of
CC   restorative therapy. (I) may also be used as antigens in the production
CC   of antibodies against TCAPs and in assays to identify modulators of TCAP
CC   expression and activity. Anti-(I) antibodies and antagonists may also be
CC   used to down regulate TCAP expression and activity. The anti-(I)
CC   antibodies may also be used as diagnostic agents for detecting the
CC   presence of TCAPs in samples (e.g. by enzyme linked immunosorbant assay
CC   (ELISA)). AAI28460 to AAI29512 and AAM24494 to AAM24523 represent
CC   nucleotide and amino acid sequences given in the exemplification of the
CC   present invention

PT   New polynucleotide, useful for the preparation of a composition for
PT   stimulating an immune response against, or treating, cancer.
XX
PS   Example 3; Page 314; 537pp; English.
XX
CC   The present invention describes compounds (I) for the immunotherapy and
CC   diagnosis of colon cancer. Also described: (1) a method for detecting the
CC   presence of cancer in a patient; (2) a method for stimulating and/or
CC   expanding T cells specific for a tumour protein; (3) an isolated T cell
CC   population comprising T cells prepared by the method of (2); (4) a method
CC   for stimulating an immune response in a patient; (5) a method for
CC   treating cancer in a patient; and (6) a method for inhibiting the
CC   development of cancer in a patient. (I) have immunostimulant and
CC   cytostatic activities and can be used in vaccines. ABZ32646 to ABZ33725
CC   and ABP55343 to ABP55391 represent human colon cancer/tumour related
CC   sequences used in the exemplification of the present invention

PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 9561; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   Detection of pathogen exposure or sterile inflammatory disease in a
PT   subject - by comparing gene expression profiles from granulocytes of the
PT   patient and control granulocytes.
XX
PS   Example 3; Page 54; 84pp; English.
XX
CC   This invention describes a method for the comparison of gene expression
CC   profiles from granulocytes from a test subject and from pathogen-exposed
CC   or sterile inflammatory disease granulocytes or quiescent granulocytes.
CC   The method is used to detect pathogen exposure or sterile inflammatory
CC   disease in a subject and to identify therapeutic agents that modulate
CC   expression of a gene in response to a pathogenic infection or to sterile
CC   inflammatory disease in a subject. The method tests for global
CC   transcriptional response of granulocytes during cell activation

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 8065; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
```

```
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   A method, useful for prognosing and treating solid tumor, comprises
PT   comparing an expression profile of a gene expressed in peripheral blood
PT   mononuclear cells to a reference expression profile of a gene.
XX
PS   Disclosure; Page; 111pp; English.
XX
CC   The invention describes a method comprising comparing an expression
CC   profile of at least one gene in a peripheral blood sample of a patient to
CC   at least one reference expression profile of the at least one gene, where
CC   the patient has a solid tumour, and each of the gene is differentially
CC   expressed in peripheral blood mononuclear cells (PBMCs) of a first class
CC   of patients as compared to PBMCs of a second class of patients, where
CC   both the first and second classes of patients have the solid tumour, and
CC   each of the first and second classes is a subcluster formed by an
CC   unsupervised clustering analysis of gene expression profiles in PBMCs of
CC   a population of patients who have the solid tumour, and where the
CC   majority of the first class of patients has a first clinical outcome, and
CC   the majority of the second class of patients has a second clinical
CC   outcome. Also described are: a system comprising (i) a memory or a
CC   storage medium including data that represent an expression profile of at
CC   least one gene in a peripheral blood sample of a patient who has a solid
CC   tumour, (ii) at least another storage medium including data that
CC   represent at least one reference expression profile of the gene, (iii) a
CC   program capable of comparing the expression profile to the reference
CC   expression profile, and (iv) a processor capable of executing the
CC   program, where expression levels of the gene in peripheral blood
CC   mononuclear cells of patients who have the solid tumour correlate with
CC   clinical outcomes of the patients; and a nucleic acid or protein array
CC   comprising concentrated probes for solid tumour prognosis genes, where
CC   each of the solid tumour prognosis genes is differentially expressed in
CC   PBMCs of a first class of patients as compared to PBMCs of a second class
CC   of patients, where both the first and second classes of patients have a
CC   solid tumour, and where the first class of patients has a first clinical
CC   outcome, and the second class of patients has a second clinical outcome.
CC   The method, system, and array are useful for prognosing and treating
CC   solid tumours. This sequence represents a solid tumour prognosis gene of
CC   the invention. Note: The sequence data for this patent did not form part
CC   of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PS   Example 1; Fig 1; 371pp; English.
```

```
XX
CC   The invention relates to an isolated O772P polypeptide, which has the
CC   structure fully defined in the specification. The composition containing
CC   the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells
CC   or antigen presenting cells are useful for stimulating an immune response
CC   and treating ovarian cancer. Detecting the presence of the
CC   polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian
CC   carcinoma cDNAs and protein cDNAs were identified using microarray
CC   technology. The present sequence represents a human ovarian carcinoma
CC   antigen polynucleotide.

PT   Oncogenic nucleic acids useful for the prevention, diagnosis and
PT   treatment of breast cancer.
XX
PS   Example 1; SEQ ID NO 45; 399pp; English.
XX
CC   The invention describes nucleic acids (I) and the polypeptides (II) they
CC   encode. The nucleic acids (I) may be used for preventing, diagnosing and
CC   treating diseases related to their aberrant expression i.e. breast
CC   cancers. For example, (I) and (II) may be used to treat disorders
CC   associated with decreased expression by rectifying mutations or deletions
CC   in a patient's genome that affect the activity of (II) by expressing
CC   inactive proteins or to supplement the patients own production of (II).
CC   Additionally, (I) may be used to produce (II), by inserting (I) into a
CC   host cell and culturing the cell to express the protein (II). (I) And its
CC   complementary sequences may also be used as DNA probes in diagnostic
CC   assays to detect and quantitate the presence of similar nucleic acids in
CC   samples, and therefore which patients may be in need of restorative
CC   therapy. The host cell may also be used as antigens in the production of
CC   antibodies against (II) and in assays to identify modulators of (II)'s
CC   expression and activity. The anti-(II) antibodies, agonists and
CC   antagonists may be used to regulate expression and activity and as
CC   diagnostic agents for detecting the presence of (II) in samples (e.g. by
CC   immunoassay). This sequence represents a polynucleotide encoding a
CC   secreted ovarian carcinoma antigen.

PT New isolated O8E or O772P polypeptides, useful for diagnosing,
PT preventing, treating and monitoring cancer, e.g. ovarian cancer,
PT stimulating the immune response in patient.
XX
PS Example 1; SEQ ID NO 45; 290pp; English.
XX
CC The invention relates to human ovarian carcinoma polypeptides, designated
CC O8E or O772P, and the polynucleotides encoding them. The invention also
CC relates to methods for inhibiting the development of cancer, e.g. ovarian
CC cancer in a patient, methods for stimulating and/or expanding T cells and
CC methods for identifying secreted tumour antigens. The polypeptides,
CC compositions, antibodies to the polypeptides and methods are useful for
CC diagnosing, preventing, treating and monitoring cancer, e.g. ovarian
CC cancer. The composition is particularly useful for stimulating an immune
CC response in patient. This sequence represents a human ovarian carcinoma
CC polynucleotide of the invention.

PT New ovarian carcinoma polynucleotides, preferably cDNAs, useful for
PT diagnosing, preventing and treating diseases, such as ovarian cancer, and
PT for eliciting humoral and/or cellular immune response.
XX
PS Example 1; SEQ ID NO 45; 398pp; English.
XX
CC The invention relates to an isolated polynucleotide comprising a sequence
CC of, a sequence hybridizing under highly stringent conditions to, or
CC having at least 75, or 90% identity to a 849 or 1399 bp, fully defined in
CC the specification, its complement or degenerate variants, or a sequence
CC of at least 20 contiguous residues of the 849 or 1399 bp sequence. The
CC polynucleotides and polypeptides are useful for diagnosing, preventing
CC and treating diseases, such as ovarian cancer, and for eliciting humoral
CC and/or cellular immune response. This sequence corresponds to an ovarian
CC carcinoma antigen cDNA of the invention.

PT   In vitro detection of systemic inflammatory response syndrome and related
PT   conditions, for e.g. monitoring progression, comprises detecting abnormal
PT   expression of disease-related genes.
XX
PS   Disclosure; Page; 75pp; German.
XX
CC   The invention relates to a novel method for in vitro detection of
CC   systemic inflammatory response syndrome (SIRS). The method comprises
CC   detecting abnormal expression of disease-related genes, or their
CC   associated peptides. The method of the invention demonstrates
CC   antibacterial, immunosuppressive and antiinflammatory applications and
CC   may be used for early differential diagnosis, monitoring progression,
CC   assessing risk, assessing the likely response to treatment and for post
CC   mortem diagnosis of systemic inflammatory response syndrome, sepsis and
CC   sepsis-like conditions. The recombinant or synthetic nucleic acid
CC   sequences of the invention, or derived proteins or peptides, may be
CC   useful as calibrants in assays for the specified diseases, for evaluating
CC   activity or toxicity in screening for active agents and/or for
CC   preparation of agents for treatment or prevention of the specified
CC   diseases. The current sequence is that of a human SIRS/sepsis diagnostic
CC   marker DNA fragment of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from WIPO at ftp.wipo.int/pub/published
CC   pct_sequences. Furthermore, a number of arbitrary SEQ ID NO.s are
CC   disclosed within the specification, however, these have not been taken
CC   into account during indexing due to inconsistencies in application and
CC   format

XX
CC The invention relates to novel genes (AAH68727-AAH73383) associated with
CC cervical cancer with cytostatic activity. The nucleic acids and encoded
CC polypeptides are useful: to assess if a patient is afflicted with
CC cervical cancer or has a pre-malignant condition; to monitor the
CC progression of cervical cancer or a premalignant condition in a patient;
CC and to select and/or assess the efficacy of a compound or therapy for
CC inhibiting cervical cancer in a patient. The nucleic acids may also be
CC useful for gene therapy

PT New immunogenic polynucleotides or polypeptides useful for diagnosing,
PT preventing and treating cancer expressing CT or CP mRNA antigens, and in
PT virology, immunology, microbiology, molecular biology and recombinant DNA
PT techniques.
XX
PS Claim 1; SEQ ID NO 1217; 207pp; English.

```
XX
CC   ABQ17575 to ABQ20506 represent isolated polynucleotide (I) sequences, and
CC   ABP54446 to ABP54472 represent protein (II) sequences, from the present
CC   invention. (I) and (II) have cytostatic activity and can be used in gene
CC   therapy and vaccines. (I), (II), antibodies and compositions from the
CC   present invention are useful for diagnosing, preventing and treating
CC   cancer, which expresses CT or CP mRNA antigens. They are useful for
CC   stimulating immune response. They can also be useful in virology,
CC   immunology, microbiology, molecular biology and recombinant DNA
CC   techniques. N.B. The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Gene vaccine containing cancer antigen genes ligated to ubiquitin genes
PT   or cytokine genes for prevention and treatment of cancer.
XX
PS   Disclosure; SEQ ID NO 29; 266pp; Japanese.
XX
CC   The invention relates to a novel genetic vaccine containing the ubiquitin
CC   gene together with a gene encoding an antigenic protein containing a T-
CC   cell target sequence. The vaccine of the invention may be useful for
CC   prevention and treatment of cancers including melanoma, sarcoma, lymphoma
CC   (Hodgkins or non-Hodgkins), leukaemia, neuroblastoma, myeloma and cancer
CC   of the lung, stomach, skin, thyroid, ovary, prostate, womb, pancreas,
CC   colon, bladder, breast, oesophagus, kidney or brain. The current sequence
CC   is that of a human genetic vaccine/ubiquitin (Ub)-related DNA of the
CC   invention.

PT Composition for detecting and treating ovarian cancer, comprises a
PT specific polypeptide, polynucleotide, T cell population, or antigen
PT presenting cell.
XX
PS Example 1; Page 104; 188pp; English.
XX
CC The present invention relates to a method of detecting the presence of
CC ovarian cancer in a patient, involving detecting ovarian cancer
CC associated polynucleotides. The method is not only used to detect the
CC presence of cancer, preferably ovarian cancer in a patient, but also is
CC used to stimulate and/or expand T cells specific for an ovarian tumour
CC protein. The sequences can be used in vaccines used to treat cancer. The
CC present sequence is an ovarian cancer associated coding sequence

PT Determining presence or absence of cancer in patient by contacting
PT patient sample with oligonucleotide that hybridizes to polynucleotide
PT encoding ovarian carcinoma antigen, and detecting amount of hybridization
PT in sample.
XX
PS Example 1; Col 201-202; 152pp; English.
XX
CC The present invention relates to compositions and methods for determining
CC presence or absence of cancer in patient. The method comprising
CC contacting a biological sample with an oligonucleotide that hybridises to
CC partial polynucleotide sequence encoding for human ovarian carcinoma
CC antigen, or its complement. The method and compositions are useful for
CC the therapy and diagnosis of ovarian cancer. The method can be used to
CC identify tumour antigens that are secreted from ovarian carcinoma and/or
CC other tumours. Effective cancer detection is achieved using the method of
CC the invention. ABX72720-ABX73050 represent partial cDNA sequences
CC encoding human ovarian carcinoma antigens

PT Investigate intracellular protein metabolism using new nucleic acid
PT construct, comprising multiple ubiquitin coding sections and a selection
PT marker.
XX
PS Example 1; Fig 7; 16pp; German.
XX
CC This invention describes a novel nucleic acid (I), comprising at least
CC one ubiquitin coding section and a selection marker fixed at a separate
CC location from the ubiquitin coding section. The invention is used to
CC investigate protease function in protein metabolism. This is useful in
CC toxicology and general cell biology. The invention provides a method that
CC is cheaper, quicker, and more reproducible than prior art methods where
CC the ubiquitin is only transiently expressed. This sequence represents the
CC vector pHA-Ub encoding DNA is used in the method of the invention

XX
PT   Novel isolated WT1 polynucleotide, and encoded polypeptide, useful for
PT   treating and diagnosing cancer in a patient.
XX
PS   Claim 1; Page 239; 260pp; English.
XX
CC   The invention relates to an isolated WT1 polynucleotide (I) and
CC   polypeptide encoded by (I). The WT1 polynucleotides and polypeptides are
CC   used for treating and detecting cancer in a patient, and for stimulating
CC   an immune response in patient. ABK69648-ABK69724 represent WT1 coding
CC   sequences and PCR primers of the invention

PT   Novel Wilms tumor polynucleotides encoding WT1 polypeptides, useful for
PT   detecting the presence of cancer in a patient, and in pharmaceutical
PT   compositions, e.g. vaccines, for treating cancers e.g. leukemia.
XX
PS   Claim 1; Page 143; 197pp; English.
XX
CC   The invention relates to an isolated Wilm tumour (WT1) polynucleotide
CC   comprising a full length protein, truncated protein, mutated protein or
CC   fusion protein. Also included are the encoded WT1 proteins, expression
CC   vectors, host cells, antibodies, detecting the presence of a cancer in a
CC   patient by contacting a biological sample with a binding agent that binds
CC   to a WT1 protein, an oligonucleotide that hybridises to a WT1
CC   polynucleotide, stimulating and/or expanding T cells specific for a
CC   tumour protein by contacting T cells with the WT1 polynucleotide, the WT1
CC   protein or antigen-presenting cells that express the WT1 protein, a
CC   composition (C1) (comprising physiologically acceptable carriers and
CC   immunostimulants as first component, and a second component selected from
CC   the WT1 polynucleotide, the WT1 protein, Ab, or T cells and antigen
CC   presenting cells that express the WT1 protein), inhibiting the
CC   development of a cancer in a patient (by incubating CD4+ and/or CD8+ T
CC   cells isolated from a patient with the WT1 polynucleotide, the WT1
CC   protein or antigen presenting cells that express the WT1 protein, such
CC   that T cell proliferate, administering the proliferated T cells to the
CC   patient, and thus inhibiting the development of a cancer in the patient)
CC   and a composition (C2) (comprising a WT1 polypeptide resuspended in a
CC   buffer comprising at least 1-3 sugars selected from trehalose, maltose,
CC   sucrose, fructose and glucose, at a concentration of 7-13%, and
CC   optionally ethanolamine, cysteine and Polysorbate-80, or WT1 polypeptide
CC   and MPL-SE or Enhanzyn). Also disclosed as anew are polypeptides
CC   comprising a variant of an immunogenic portion of WT1 polypeptide. C1 is
CC   useful for stimulating immune response in a patient, and for treating
CC   cancer in a patient. The oligonucleotide is also useful for determining
CC   the presence of a cancer in a patient. The WT1 polynucleotide and the WT1
CC   protein are useful in pharmaceutical compositions, e.g. vaccines. the WT1
CC   protein is useful as marker to indicate the presence or absence of a
CC   cancer. C1 is useful for inhibiting the development of a malignant
CC   disease in a patient, for preventing and treating metastatic diseases
CC   e.g. leukaemia and cancer, and for removing tumour cells from a
CC   biological sample. Ab (binding agent for the WT1 protein) is useful for
CC   detecting the presence of cancer in a patient. The present sequence
CC   encodes a fusion partner for WT1.

PT   herpes simplex virus (HSV) antigen, useful for diagnosing, treating or
PT   preventing HSV infection.
XX
PS   Claim 3; SEQ ID NO 80; 383pp; English.
XX
CC   The invention relates to a novel isolated polypeptide comprising at least
CC   an immunogenic portion of a herpes simplex virus (HSV) antigen. The
CC   polypeptide of the invention demonstrates virucide activity and may be
CC   useful for diagnosing, treating or preventing Human herpesvirus 2 (herpes
CC   simplex virus type 2, HSV2) infection via the production of a vaccine.
CC   The current sequence is that of an human ubiquitin DNA which was used in
CC   the exemplification of the invention.

PT   Inducing an immune response in an animal, useful for treating or
PT   preventing cancer, comprises administering a composition comprising a
PT   viral vector comprising an immunogenic portion of a WT1 polynucleotide.
XX
PS   Example 19; SEQ ID NO 384; 229pp; English.
XX
CC   The invention relates to a novel method for inducing an immune response
CC   in an animal which involves administering a first and a second
CC   composition comprising a first and a second viral vector, respectively,
CC   each having at least an immunogenic portion of a WT1 (Wilms tumour)
CC   polynucleotide operably linked to an expression control sequence. The
CC   method of the invention has immunostimulant and cytostatic applications
CC   and may be useful for generating or enhancing an immune response to WT1,
CC   possibly via the production of a vaccine, as well as for preventing
CC   and/or treating malignant diseases such as leukaemia and cancer. The
CC   current sequence is that of the human WT1-related DNA of the invention.

PT   New polypeptides and polynucleotides useful for generating or enhancing
PT   an immune response to Wilms' tumor, or for treating and/or preventing
PT   malignant diseases, e.g. cancer.
XX
PS   Example 19; SEQ ID NO 384; 259pp; English.
XX
CC   The invention relates to an isolated polypeptide comprising an
CC   immunogenic portion of a Wilms' tumour antigen (WT1), or their variants
CC   that differs in substitution(s), deletion(s), addition(s) and/or
CC   insertion(s), where ability of the variant to react with WT1-specific
CC   antisera and/or T-cell lines or clones is not substantially diminished.
CC   Also included are a fusion protein comprising at least one WT1
CC   polypeptide, an isolated polynucleotide encoding the fusion protein, a
CC   composition comprising a WT1 polypeptide in combination with a
CC   pharmaceutical carrier or excipient, a vaccine comprising a WT1
CC   polypeptide in combination with a non-specific immune response enhancer,
CC   an expression vector comprising the polynucleotide operably linked to an
CC   expression control sequence and a host cell transformed or transfected
CC   with the expression vector. The immunogenic portion of the WT1
CC   polypeptide has been modified such that the ability of the immunogenic
CC   portion to bind to an MHC (Major Histocompatibility Complex) molecule or
```

```
CC   to HLA-A2 is increased relative to that of the immunogenic portion. The
CC   WT1 polypeptide may comprise a Wilms' tumour antigen having a deletion of
CC   a proline rich region at amino acid positions 54-68 of the Wilms' tumour
CC   antigen. The fusion partner is selected from Ra12, protein D, LYTA, a HIS
CC   tag, a targeting signal capable of directing a polypeptide to the
CC   endosomal/lysosomal compartment, twin arginine translocator (TAT), and
CC   truncated twin arginine translocator. The polypeptide, polynucleotide or
CC   compositions comprising them may be used for generating or enhancing an
CC   immune response to Wilms' tumour, and for treating and/or preventing
CC   malignant diseases, e.g. cancer. The compositions may be used as markers
CC   for the progression of cancer. The present sequence is a human cDNA for a
CC   fusion partner for WT-1.

PT   New polypeptides and polynucleotides comprising an immunogenic portion of
PT   a Wilms' tumor antigen, useful as vaccines for preventing or treating
PT   malignant diseases, e.g. cancer or leukemia.
XX
PS   Example 19; SEQ ID NO 384; 252pp; English.
XX
CC   The invention relates to an isolated polypeptide which comprises an
CC   immunogenic portion of a Wilms' tumour antigen having a deletion of a
CC   proline rich region, so that the ability of the variant to react with WT1
CC   -specific antisera and/or T-cell lines or clones is not substantially
CC   diminished. The polypeptide is useful as a vaccine in combination with a
CC   non-specific immune response enhancer for preventing malignant diseases.
CC   The polypeptide is useful for enhancing or inducing an immune response in
CC   a patient; for inhibiting the development of malignant disease in a
CC   patient; for stimulating or expanding T cells. The polypeptides,
CC   polynucleotides and compositions are useful for treating malignant
CC   diseases including leukaemia and cancer. The present sequence represents
CC   the human ubiquitin DNA.

PT Gene vaccine containing cancer antigen genes ligated to ubiquitin genes
PT or cytokine genes for prevention and treatment of cancer.
XX
PS Disclosure; SEQ ID NO 1; 266pp; Japanese.
XX
CC The invention relates to a novel genetic vaccine containing the ubiquitin
CC gene together with a gene encoding an antigenic protein containing a T-
CC cell target sequence. The vaccine of the invention may be useful for
CC prevention and treatment of cancers including melanoma, sarcoma, lymphoma
CC (Hodgkins or non-Hodgkins), leukaemia, neuroblastoma, myeloma and cancer
CC of the lung, stomach, skin, thyroid, ovary, prostate, womb, pancreas,
CC colon, bladder, breast, oesophagus, kidney or brain. The current sequence
CC is that of a genetic vaccine-related ubiquitin (Ub) DNA of the invention.

PT Novel nucleic acids and proteins for identifying therapeutic agents
PT useful for treating and diagnosing cancer, especially colon cancer.
XX
PS Claim 16; Page 191-192; 345pp; English.
XX
CC This sequence represents a human nucleotide sequence which is
CC differentially expressed in colon cancer cells compared to the expression
CC levels in normal cells. The nucleotide sequence can be used as a source
CC of primers and probes. The nucleotide sequence is useful for determining
CC the phenotype of a cell by detecting the differential expression of the
CC sequence relative to a normal cell. The probes derived from the sequence
CC can also be used to determine the phenotype of cells in a sample. Probes
CC and antibodies which hybridise to the nucleotide sequence can also be
CC used to determine the phenotype of a cell. The primers are useful for
CC detecting a mutation in a test nucleotide sequence and also for detecting
CC cancer, preferably colon cancer. Antibodies against the protein encoded
CC by the nucleotide sequence can also be used in a method to detect colon
CC cancer. The diagnostic method is non-invasive and accurate for diagnosing
CC colon cancer at an early stage

PT New modified arrestin comprising an arrestin and a ubiquitin moiety or
PT their biologically active fragment, useful for treating a human or a non-
PT human subject suffering from a GPCR-related disease.
XX
PS Claim 9; Fig 8; 90pp; English.
XX
CC The present sequence is the coding sequence for a chimeric polypeptide
CC comprising enhanced yellow fluorescent protein (EYFP), beta-arrestin 2
CC and ubiquitin. The chimeric polypeptide is a claimed example of modified
CC arrestins of the invention that comprise an arrestin (or biologically
CC active fragment) and ubiquitin (or biologically active fragment) and an
CC optional label. The modified arrestin has an increased affinity for a G-
CC protein coupled receptor (GPCR) such that the arrestin remains associated
CC with the GPCR and traffics with the GPCR into endosomes and hence does
CC not dissociate at or near the plasma membrane. The modified arrestin
CC increases the internalisation of the GPCR. The invention provides the
CC modified arrestins, nucleic acids encoding them, expression vectors and
CC host (mammalian, bacterial, yeast, plant, insect or animal) cells. The
CC modified arrestins are used in a claimed method of screening compounds
CC and sample solutions for a GPCR agonist, antagonist, inverse agonist or
CC desensitization active compound. Claimed methods of treating a human or
CC non-human subject suffering from a GPCR-related disease comprise
CC administering a compound identified by this method or a nucleic acid
CC encoding a modified arrestin.

CC neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC can be used in gene therapy. The colon cancer antigen polynucleotides,
CC proteins and antibodies to the proteins are useful for the prevention,
CC treatment and diagnosis of colon disorders, such as colon cancer. The
CC polynucleotides may be used in diagnostics and research, such as for
CC chromosome identification, and as hybridisation probes. The proteins may
CC also be used to prevent diseases such as neural disorders, immune system
CC disorders, muscular disorders, reproductive disorders, gastrointestinal
CC disorders, wounds, renal disorders, infectious diseases, and
CC cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent
CC sequences used in the exemplification of the present invention

PT   New polynucleotide sequences obtained from various cDNA libraries, useful
PT   as hybridization probes, as oligomers for PCR, for chromosome and gene
PT   mapping, in the recombinant production of protein, or in generating
PT   antisense DNA or RNA.
XX
PS   Claim 1; SEQ ID NO 22118; 44pp; English.
XX
CC   The invention relates to an isolated polynucleotide comprising any one of
CC   38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC   determined by the technique of SBH (sequencing by hybridisation). Also
CC   included is a purified polypeptide comprising a sequence corresponding to
CC   a reading frame of the novel polynucleotide. The nucleic acid sequences
CC   are useful in diagnostics as expressed sequence tags (EST) for
CC   identifying expressed genes or for physical mapping of the human genome,
CC   in forensics, in assessing biodiversities, or in identifying mutations
CC   responsible for genetic disorders and other traits. The nucleotide
CC   sequences are also useful as hybridisation probes, as oligomers for PCR,
CC   for chromosome and gene mapping, in the recombinant production of
CC   protein, or in generating antisense DNA or RNA. The purified polypeptide
CC   is useful for generating antibodies specific for it. The present sequence
CC   is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030073623

PT   A method, useful for prognosing and treating solid tumor, comprises
PT   comparing an expression profile of a gene expressed in peripheral blood
PT   mononuclear cells to a reference expression profile of a gene.
XX
PS   Disclosure; Page; 111pp; English.
XX
CC   The invention describes a method comprising comparing an expression
CC   profile of at least one gene in a peripheral blood sample of a patient to
CC   at least one reference expression profile of the at least one gene, where
CC   the patient has a solid tumour, and each of the gene is differentially
CC   expressed in peripheral blood mononuclear cells (PBMCs) of a first class
CC   of patients as compared to PBMCs of a second class of patients, where
CC   both the first and second classes of patients have the solid tumour, and
CC   each of the first and second classes is a subcluster formed by an
CC   unsupervised clustering analysis of gene expression profiles in PBMCs of
CC   a population of patients who have the solid tumour, and where the
CC   majority of the first class of patients has a first clinical outcome, and
CC   the majority of the second class of patients has a second clinical
CC   outcome. Also described are: a system comprising (i) a memory or a
CC   storage medium including data that represent an expression profile of at
CC   least one gene in a peripheral blood sample of a patient who has a solid
CC   tumour, (ii) at least another storage medium including data that
CC   represent at least one reference expression profile of the gene, (iii) a
CC   program capable of comparing the expression profile to the reference
CC   expression profile, and (iv) a processor capable of executing the
CC   program, where expression levels of the gene in peripheral blood
CC   mononuclear cells of patients who have the solid tumour correlate with
CC   clinical outcomes of the patients; and a nucleic acid or protein array
CC   comprising concentrated probes for solid tumour prognosis genes, where
CC   each of the solid tumour prognosis genes is differentially expressed in
CC   PBMCs of a first class of patients as compared to PBMCs of a second class
CC   of patients, where both the first and second classes of patients have a
CC   solid tumour, and where the first class of patients has a first clinical
